

Main Aim of the EPEP project

Intro EPEP project

On May 19, 2010, the EU Directive EPBD, 2002/91/EC has been updated, specifically for buildings with a cooling capacity of >12 kW. This EPBD contains guidelines, methods and requirements for regular, periodic inspection, testing and certification of the energy performance of old and new buildings. Due to this regulation there's now an urgent need on the labor market for well qualified individuals to inspect, certify and maintain installations for the comfort of persons (>12 kW). In the partnership a growing shortage exists of certified inspectors to fulfill the requirements of the EPBD. Also there's a lack of up-to-date training courses, competence profiles and exams in these fields. The EPEP project contributes to this matter!

The main aim of the EPEP project is to optimize the competence profiles, update training materials/ approaches for the sectors electro, installation & maintenance to be able to fulfil the obligations of the EPBD. Main objective: transferring innovation in knowledge between VET- and VET-related organizations on inspection & certification of installations for the comfort of persons, >12 kW.

EPEP Project Results

There is a urgent need for the proposed project results such as:

- Competence profiles, materials, methods and approaches fit to the EU Directive EPBD,2002/91/EG
- ICT D-base with competence profiles, teaching-, training- & lesson materials
- ICT measurement / assessment tool for the screening / assessment, validation of prior learning, personal development & lifelong learning of competences
- Pilots / tests for trainers, teachers, students / workers
- Information for sectors (EU), f.e. through seminars, periodical publications

Central EPEP Objectives

The central objective of the EPEP project is; Transfer innovation in knowledge between VET and VET-related organizations concerning inspection and certification of installations for the comfort of persons, larger than 12 kW and therefore optimizing competence profiles, up-to-date training materials/ approaches for the sectors electro, installation and maintenance.

EPEP MEETING BRUGES 28/03/2013

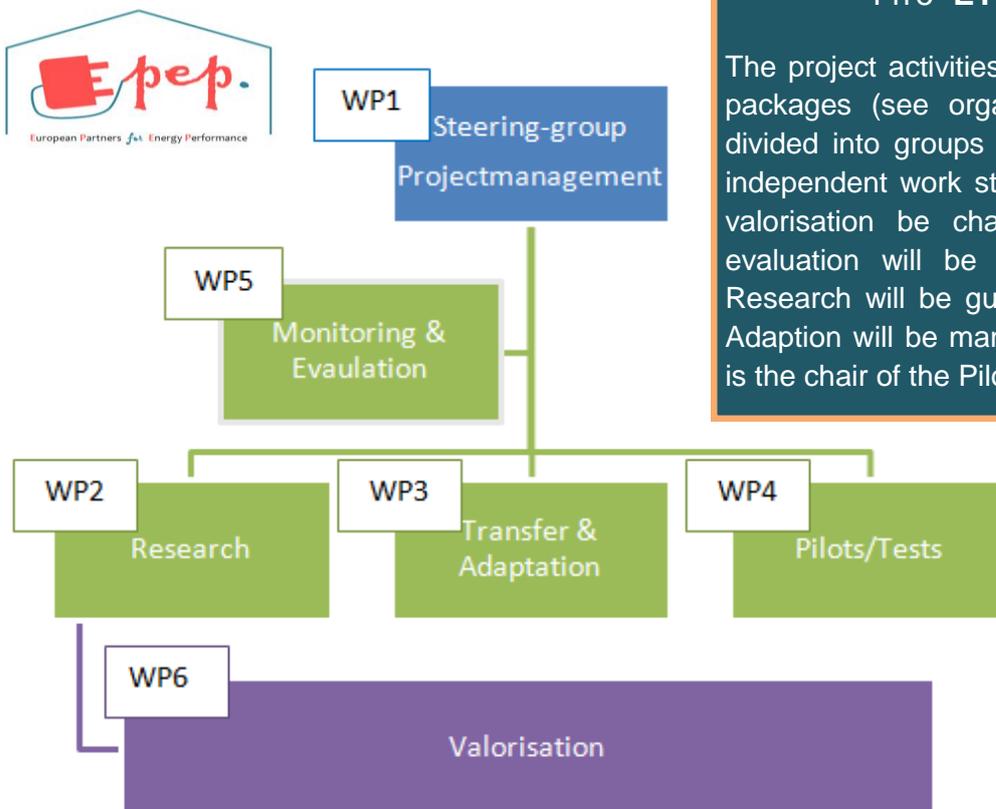

Since there already have been a few meetings for the EPEP project, one of the meetings will be will be addressed in this first newsletter. The meeting in Bruges on the 28th of March was the third meeting of the EPEP project with the following highlights on the agenda:

Composition of the Format for the inventory of the EPBD. Structure for setting up the dictionary competences for the easy to use assessment tool and advice about the database for learning material

The EPEP Work packages

The project activities are conducted according to the work packages (see organigram). These work packages are divided into groups (activities), where each group has an independent work structure. The project management and valorisation be chaired by IKKE. The monitoring and evaluation will be managed by Pro Work. WP2, The Research will be guided by PETROC and the Transfer & Adaption will be managed by HCABE. Finally Syntra West is the chair of the Pilots & Tests in WP4.
