Projektinformation

Titel:	Grünes Dorf
Projektnummer:	510138-LLP-1-2010-1-UK-LEONARDO-LMP
Jahr:	2010
Projekttyp:	Innovationsentwicklung
Status:	abgeschlossen
Land:	EU-Zentralisierte Projekte
Marketing Text:	Die Ergebnisse des "Grünen Dorfs" werden für alle ländlichen Gemeinden zur Verfügung stehen, die zukünftig nachhaltiger wirtschaften und ihre ökonomischen Verhältnisse durch die Verwendung zeitgemäßer Methoden fördern möchten.
Zusammenfassung:	The "Green Village" project brings together 9 European states, who share common problems in their local rural areas, such as outward migration of young people, aging populations, abandonment of land, loss of traditional skills and income strands, disintegration of cultural landscape. The partners also recognise and share a number of opportunities for sustainable development on a village scale, through contemporisation of traditional skills, rural energy supply, empowerment of communities and development of new markets for natural, local and sustainable products, including rural food and wood but also culture and nature, through the development of touristic offerings. These opportunities need to be brought into VET through a collection of study modules for delivery on a village scale to local people, practitioners & visiting students, in order to kick start rural regeneration. Through a series of Work Packages the project develops 6 modules, on Sustainable building, Rural energy, Empowering communities, Rural food, Sustainable ancestors and Wood products. Further WP's are on Access to Rural Research - ensuring that science supports the modules, i.e., in terms of carbon emissions; Dissemination - to be sure that project results are widely read and multiplied; Learning by Doing - testing models and ideas through a series of practical training actions delivered by local and international experts to local people in each rural area and visitors from twinned partner regions. The modules will seek to transfer appropriate technologies between regions and people and will be transferable to all rural areas in Europe. Each of the 9 partners have links to training institutions within further and higher education and these will be used in the process of curriculum design and development. The legacy of Green Village will be visible benefit in selected villages and curriculum delivered into the future by a network of VET institutions and organisations undertaking mobility.
Beschreibung:	The sectors represented by the consortium and involved in 'Green Village' include 'Forestry', 'Cultural heritage' and 'Rural development' - through local networks, 'Agriculture' also features strongly. Each partner links to an educational institution thus bringing 'Education' into the project. Additionally there are two research organisations, NAVE in Iceland are concerned with cultural/social/historical research and IVALSA from Italy in wood/forest research. Both are 'Applied research', this is also sectorial - and it could be termed 'vocational research' because the lead-in to practical application is short and suited to businesses. The partners and sectors are carefully selected to cover the 'Green Village' theme. We aim to reach deeply into the sectors through the strengths of our local networks which span the sector and link rural sectors together (culture / nature / environment / social + Forestry & Agriculture). All partners have 'Equal Opportunity' policies and P1, P2, P4, P8 & P9 are active social partners, working with excluded and disadvantaged groups (sometimes disabled), including ethnic minorities, older residents, women returning to work/education, long term unemployed, geographically disadvantaged. Green Village is designed to accommodate and include all parts of each targeted community. The project is SME-led, the consortium includes 3 SME's, 3 NGO's, 1 Public body, 2 research organisations. The SME's & the NGO's all are linked into the economic aspects of rural development and recognise that VET must result in jobs, product development, enhanced markets and increased rural income. To this end, the target groups for the curriculum developed include practitioners and businesses as well as villagers, who include farmers and forest owners/ foresters; the vast majority of this target group are SME's. VET trainees are also targeted; they are from local, rurally

Projektinformation

based schools who have strong industry linkages and develop trainees for local jobs.

Themen:
*** Interkulturelles Lernen
*** Nachhaltigkeit
*** Lebenslanges Lernen

Produkt 'Window on the World'

Titel: Window on the World

Produkttyp:

Marketing Text:

Beschreibung: This WP is the project web page - it links to all other WP's, so requires it's own WP. Of course it is about dissemination but much more – it will have news items (from all partners) but also host curriculum , link to all partners web pages & to the 'facebook' group – if it features also something like yahoo messenger, it can be an image exchange tool as well. P3, Hylates in Cyprus will work with a good team of subcontractors (web designers)
to create an interactive web portal / hub that has wide accessibility and encourages input from a wide range of end users. Some external sub-contract training in 'Dreamweaver' is planned; this might be demanded by all partners. All the reports (prepared to a quality standard in WP9) will be posted on the 'Window-to-the-World', as well as images, video footage and diagrams to describe skills, products & processes in the Green Village. Students, practitioners & villagers will be encouraged to gather images & input personal stories to the 'Window'. They may graduate to more complex inputs including recorded interviews and inputs as podcasts. The e-bulletins that partners produce for dissemination will be inputted, as will timetables giving dates of GV activities. The Green Village magazine & translated material from it will be posted as pdf files & can be ordered as a hard copy or downloaded. We intend the 'Window-on-the-World' web hub development to be interactive and part of the training experience, i.e., encouraging communities to develop their own web-based media, news sheets and ways of attracting visitors - especially to be involved in skills, products & processes that featured in GV actions & dissemination. The 'Window' will have a major role in keeping the GV legacy alive. It will remain open, active & updated for a minimum of 5 years. The 'Window' will have elements in all 9 featured languages.

Produkt 'Green Village Experts Database'

Titel: Green Village Experts Database

Produkttyp: andere

Marketing Text:

Beschreibung: During the project preparation work in selected villages across the consortium, needs analysis flagged up issues that consortium members did not know the answer to. Some mechanism to create a database of experts for ‘Green Village’ was thought to be useful. P1 started the process with funding from LEADER Plus to create a database of experts from the UK and beyond for sustainable building (P4 assisted in this). This has already been useful in considering that subject area in GV & Grampus's plan to offer training in clay buildings (finding clay expert in Scotland, 'loam building' expert in Saxony & lime expert in western Romania). Other issues led into very straightforward needs; in Romania wild pigs destroy crops & are resulting in huge reductions of cultivated village fields and German hunting specialists are able to advise on culling, hunting systems & associations, game tourism & sale of products from game management. The WP is led by P4, who also helped with answers to high invasion of fruit trees by mistletoe in SK and opportunities to sell gathered plant material to pharmaceutical markets; P7, NAVE (IS) also assist - they run such in IS. There are many such opportunities that arise with just a small input of expert advice. VDH will maintain a database of experts from all countries who have skills & knowledge not within the consortium. All partners will input to this and VDH will receive requests, search the database & if there is no entry, send out a request to partners & beyond. A budget (in subcontracting) will be held for experts to be paid for advice & in some cases be mobilised where their input will address issues, assist participative training & add to the content & value of curriculum. The villagers as a target group are not expected to contribute to this beyond being co-operative and welcoming. The input of experts enters into curriculum & VET systems & emerges with solutions that become cornerstones of rural regeneration & part of the GV legacy.
