Curriculum Strand: Building Practice

Table of Contents

Building Physics

1 ..... The sustainability of building physics

2 ..... The relevance of building physics

3 ..... The basic principles of thermal theory

3.1 ..... Building Physics: The building envelope as a form of clothing

3.2 ..... Thermal conduction – Radiation – Convection

3.3 ..... Thermal bridge or cold bridge?

3.4 ..... Thermal Bridges: Further examples

3.5 ..... Thermal Bridges: Internal Insulation

4 ..... Ice - Water – Steam

4.1 ..... Air and Steam

4.2 ..... The processes involved in building physics:
Steam and water droplets in contact with building materials

4.3 ..... Pores and Capillaries

5 ..... Buiilding Physics: Roof and Wall

5.1 ..... A building is composed of surfaces and openings

5.2 ..... The functional layers of the building envelope

5.3 .....Airtight construction as an imperative

5.4 .....Windproofness

5.5 .....Protection against summer heat

5.6 .....The Blower-Door Test

5.7 .....The three techniques of façade construction

5.8 .....Calculating the U-Value

5.9 .....The Energy Efficiency of Buildings

5.10 .....Moisture Meters

6 .....Fire Protection

6.1 ..... European Fire Protection Classes

7 ..... Sound

7.1 ..... Sound – Relevant issues

7.1.1 ..... Sound – The basic principles

7.1.2 ..... Calculating sound in a building context

7.2 ..... Sound protection in residential buildings

Building Materials

1…….Sustainability of Building materials

2……..What building materials are available

3……..Natural stone

4……..Binders

5……..Aggregates

6……..Artificial stones

7…….Mortar

7.1…….Cement mortar

7.2. ……Lime mortar

7.3……..Plaster mortar

7.4……..Loam mortar

8…….Screed and concrete

9…….Plasters

10. …….Insulating materials

10.1……Natural insulating materials

10.2. …..Chemically derived Insulating materials

10.3……Insulating materials made from minerals

11……..Metals

12……Types of Wood

13……Types of glass

Building Services

Heat Generation; Heat Distribution; Use of Rainwater

1. ..... The sustainability of heat generation, heat distribution and the use of rainwater

2. ..... Heat generation

2.1 ..... Fossil energy sources

2.2 ..... Alternative heat sources

2.3 ..... Solar collectors and their functions

2.4 ..... Thermal Pumps

2.5 ..... Wood pellets and wood chippings

2.6 ..... Gas condensing technology

2.7 ..... Thermal Power Stations

2.8 ..... Hydrogen

2.9 ..... High termperature fuel cells

2.10 .....Generating cold

2.11 ..... Adsorption Chillers

3. ..... Heat Distribution

3.1 ..... The bases of heat distribution

3.2 ..... Distribution of heating water

3.3 ..... Distribution of water supply

3.4 ..... Water in hoses

3.5 ..... Water distribution – Small cross-sections

3.6 ..... Water distribution – Short runs

3.7 ..... Planning

3.8 ..... Installing

4. ..... The use of rainwater

4.1 ..... Calculating for rainwater

4.2 ..... Why use rainwater?

Electricity generation and usage

1. ..... The sustainability of electricity generation and use

2. ..... Current means of electricity generation

2.1 ..... The sun produces electricity = Photovoltaic

2.2 ..... .Mini wind turbines

2.3 ..... Thermal power stations

3. ..... Elecricity usage

3.1 ..... Electric aggregation as a means to save energy

3.2 ..... Light.

4. .....Communications systems

5. .....Home Automation

Protection from natural phenomena

1. ..... Preparing a house for climate change

2. ..... Storms: High winds

3. ..... Heavy Rain: Flooding

4. ..... Thunder Storms

5.....Heat

Special Needs

1. ..... Special Needs

2. ..... Comfort for all age groups

2.1 ..... What does this involve?

2.2 ..... Horizontal obstacles

2.3 ..... Vertical obstacles

2.4 ..... Spatial obstacles

2.5 ..... Ergonomic obstacles

2.6 ..... Sensory obstacles

2.7 ..... The concept of Universal Design

3. .....Safety.

4.....Allergy conscious building

4.1 ..... Who can help?

5. .....Take the right photographs for documentation purposes

6. ..... The cost framework

7. ..... Learn to live the right way

7.1 .....The Occupant

7.2 ..... WE

7.3 ..... The partial renovation

7.4 ..... The right ventilation

7.5 ..... The right furnishings

7.6 ..... Water – the number one enemy of the building

7.7 ..... Mould.

Attachments

1. ..... Checklist - Air Tightness/Wind Proofness for energy advisers

2. ..... Ventilation Moisture Dryness

3. ..... Behaviour in summer

4. ..... Solarthermy – Rough Estimates

5. ..... Photovoltaic – Rough Estimates

6. ..... Systems for using rainwater
