Project Information

Title: S.M.A.R.T. KNOW. NET. - Skills Matching And Route for Training Knowledge Network

Project Number: 2010-1-IT1-LEO05-01007

Year: 2010

Project Type: Transfer of Innovation

Status: granted

Country: IT-Italy

Marketing Text: According to the 'New Skills for New Jobs' report (Feb. 2010), written by an independent panel established by the EU Commission, by reason of insufficient information both workers and enterprises have not always a suitable level of professional ability to invest in the specific sectors (Skills mismatch).
The symptoms are high (youth-) unemployment and difficult transitions from school to work on one side, and complaints of employers about a lack of job-relevant skills on the other side and the training programmes, often out of date, do not meet the needs of industry.
KN platform, developed by IRFI and Trade Associations of the province of Rome in 2009 , aimed to detect the demands of professional skills of companies and to identify the evolutionary lines of training facilities needed to meet these demands.
The SMART KNOW NET project aimed at transferring this innovating tool to the countries of the project partners: Spain, Poland, Greece and Latvia (geographic dimension).

Summary: SMART KNOW NET built on the success of KN, developed by IRFI and currently operating in province of Rome, by developing the software product and experiences gained, by enhancing the cultural and national diversity offered by a Latvian University and an Italian University, an experienced ITC small company in Greece, a Chamber of Commerce in Poland and a Public Employment Agency in Spain (in the first year substituted by the entrepreneurial association of Aragon - Spain). KN is a development process, supported by a software tool, which helps VET, other professionals and SMEs in assessing skills mismatch, providing evidence of professional development needed to meet the requirements thus offering greater precision in HR development and training. Main objectives were: transfer and validation of KN at EU level developing a standalone software tool to SMEs and VET to assess skills mismatch and plan continuing professional development, against individual and corporate goals as well as a conceptual framework and the associated processes for analysing and processing skills mismatch; create a pan-European tool, localised for different countries, to help SMEs and VET describe competence in a transparent and transferable way; offer the KN software in the public domain and to establish a network of providers of KN support services. Main outcomes: Consolidation of the existing KN infrastructure by guaranteeing the adoption in other countries of those activities and services that currently contribute to the effective support of skills mismatch assessment and processing to support the drawing up of professional development plan. Evolution of this infrastructure towards a robust and persistent European system, by enhancing the existing services, by deploying new services/tools including support for adoption of common taxonomies.

Description: Introduction: The KN (Knowledge Network) Project

By reason of insufficient information both workers and enterprises have not always a suitable level of professional ability to invest in the specific sectors. To facilitate the matching between professional abilities and actual job offers and to direct the development of such abilities so that to improve the perspectives of development to middle and long time term it is essential to improve the activities of analysis and survey of job market and to support the development of systems able to foresee the demands of professional competences.
KN project aimed to detect the demands of professional skills of companies and to identify the evolutionary lines of training facilities needed to meet these demands. The demands of professional skills can affect both subjects who carry already activities in the companies and persons who may be asked to perform their work in the companies.

Project Information

KN is a system designed, achieved and managed by IRFI and by Trade Associations of the province of Rome. IRFI had the following tasks: to manage the system on a technical plan, to execute the centralized elaborations, to assure the efficacy and the continuity of the service, to maintain the security control of the accesses. Trade Associations had the task to interface the firms for the data collection on the demand of competences from the companies.
In the environment of KN project IRFI and SOUL (Sistema Orientamento Università Lavoro - the new Career Center of the four public Universities of Rome) have started a mutual itinerary for the interchange of information with the purpose to optimize the functionalities of every system and to offer to students, to workers and to enterprises a service that can be of utility both in a viewpoint of employment and of evolution of the formation in relationship to the change of work market.

The TOI Project: S.M.A.R.T. KNOW. NET. (Skills matching and Route for Knowledge Network)

The skills mismatch is a striking problem in all European countries. The symptoms of the skills mismatch are high (youth-) unemployment and difficult transitions from school to work on one side, and complaints of employers about a lack of job-relevant skills on the other side and training programmes available which are often out of date and do not meet the needs of industry.
S.M.A.R.T. KNOW. NET. built on the success of KN, developed by IRFI and currently operating in province of Rome, by developing the software product and experiences gained, by enhancing the cultural and national diversity offered by a Latvian University and an Italian University, an experienced ITC small company in Greece, a Chamber of Commerce in Poland and a Public Employment Agency in Spain (in the first year substituted by the entrepreneurial association of Aragon - Spain). KN is a development process, supported by a software tool, which helps VET, other professionals and SMEs in assessing skills mismatch, providing evidence of professional development needed to meet the requirements thus offering greater precision in HR development and training.
Main objectives were: transfer and validation of KN at EU level developing a standalone software tool to SMEs and VET to assess skills mismatch and plan continuing professional development, against individual and corporate goals as well as a conceptual framework and the associated processes for analysing and processing skills mismatch; create a pan-European tool, localised for different countries, to help SMEs and VET describe competence in a transparent and transferable way; offer the KN software in the public domain and to establish a network of providers of KN support services.
Main outcomes achieved: Consolidation of the existing KN infrastructure by guaranteeing the adoption in other countries of those activities and services that currently contribute to the effective support of skills mismatch assessment and processing to support the drawing up of professional development plan. Evolution of this infrastructure towards a robust and persistent European system, by enhancing the existing services, by deploying new services/tools including support for adoption of common taxonomies. Part of the power of KN, however, is that it is more than just a skills mismatch assessment & professional plan development tool. It also constitutes a public record of the skills and personal competences offered and asked for, which can be made available to the wider world of the business sector, VET and decision makers. Further linking technical and vocational education with industry and availability of timely and relevant labour market information is an important innovation crucial to bring about a proper match between technical and vocational education and the needs of the industry.

Themes: *** ICT
** Enterprise, SME
* Labor market

Sectors: *** Information and Communication
** Other Service Activities
* Education

Project Information

Product Types: others
website
CD-ROM

Product information: An Internet web site has been developed by P4 and is constantly implemented by the partnership(month 0-24). The portal is used as a main internet presentation of the project. It is updated in order to promote the project and its results. Internal panels, which are accessed only by project partners, have been developed for communication and management: they are used to exchange draft documents and to facilitate the communication between the different working groups. Furthermore, a brochure and a leaflet have been developed describing the S.M.A.R.T. KNOW. NET. Project, the benefits for all stakeholders and the project partners. The brochure has been edited in each country. A project's logo has been designed by P4 and published on the project's website. The KN platform and the Manuals (Installation and User Manual) have been translated in English and transferred to the partners. They have completed the translation and localization process into the national languages and national platforms (Manuals included). Installation Reports done by the partners are avaliable as well as Installation and User Manuals. The effective test of the platform was done following the statistical sample mentioned in the “Convergence“ document. Each participant was asked to express how many skills demand would have been upload in the platform and to explain how it was reached (how many and which sectors had been chosen, how many demands for each sector etc.). During the testing phase the technical group worked together with the management group to complete the test activities in the best way. At the end, when the testing phase was concluded the partners presented their results and they also were asked to answer the validation test and to present all results during the last meeting in Riga. Validation Report is avaliable on this portal and on the project's website.

Events

Final Conference (Sixth transnational Meeting)

Date	16.11.2012
Description	Welcome addresses, Presentation of technological activities and results by each partner and by project coordinator, SWOT analisys made by Sapienza, future perspectives.
Target audience	entrepreneurs associations, public institutions, students, University academic Representatives, project partners.
Public	Event is open to the public
Contact Information	d.petacchi@rfi.it
Time and place	16 November 2012 - Sapienza University of Rome - Italy

Fifth transnational meeting - Evaluation of Results

Date	19.10.2012
Description	• Discuss the testing activities and validations of results • Analyse and discuss technical questions incurred during the two years of activities and methodology for their solution. • Inform the partnership about the feasibility study into use of KN interoperability with graduate and postgraduate database SOUL. • Inform the partnership about the final Conference in Rome and discuss the programme. • Discuss administrative issues concerning the time scheduling for the Final report
Target audience	project partners
Public	Event is open to the public
Contact Information	d.petacchi@irfi.it
Time and place	19 October 2012 - Riga - Latvia

Events

Fourth transnational meeting - Follow up of National SMART KN platforms test

Date	11.06.2012
Description	• Present the state of the art of the project, review aims and target of KN system and share future scenarios • Share and discuss the next steps of the project focusing on the dissemination activities (already done and to be done) and on the results of monitoring activities (number of skills demands uploaded, distribution by sector and company size, technical questions and technical problems: downloading of excel and pdf files). • Inform the partnership about the amendment proposal: Eommex withdrawal and extention of contractual period • Share and discuss the results of the monitoring and testing activities • Analyse and discuss platform functionalities and technical questions.
Target audience	project partners
