Project Information

Title: E.guide

Project Number: LLP-LdV-ToI-SI-2008-27

Year: 2008

Project Type: Transfer of Innovation

Status: completed

Country: SI-Slovenia

Marketing Text: E.guide is a highly interactive portal, designed for online career counselling and guidance. It has been created for the usage of both counsellors and counselees, its most important and practical innovation being the CHAT option, which enables a direct communication between both parties. Interactive e-counselling is available in Slovenian, Swedish and French, while the informational site also comes in English and German language. The portal has prospects of being adapted into many more countries than Slovenia, Sweden and France, by new TOI projects or actual organizations, handling career counselling and guidance. The interest for the portal has already been shown in Slovenia, by the individual counsellors attending Kadis' trainings and organizations, who so far had the chance to view it.

Summary: The project is a response to changes guidance counsellors and job seekers are facing. The aims are to improve accessibility, attractiveness of guidance services, shorten waiting periods, make counselling more approachable and improve contact between job seekers and counsellors. These goals are intended to be achieved by creating E.guide online - an integrated system with a selection of tools for identification and adaptation of competences, necessary for the job seeking process. It offers reliable tools and methodological approaches that enable efficient work with the users. With the permission of the job seeker, the counsellors has access to the individual's data and is able to help them trough a modular and individual approach that will answer their specific needs and bridge the identified competence gaps. The portal also contains many useful links not only for the users but also for the counsellors.

Description: E.guide main objectives:
- To provide the counsellors with innovative, modern approach with quality tools and methods by integrating numerous quality, innovative methodologies, approaches and products within a modern, ICT based system;
- To improve the quality of the guidance services (faster, more efficient, quality reliable assessment tools, better monitoring of job seekers' activities, tailor-made training …) and match them with labour market demands (competence model) to both and clients' benefit;
- To improve the attractiveness and accessibility of guidance services (no waiting periods, bringing guidance closer to individuals in time and place, better communication between job seekers and counsellors ...).

E.guide main phases:
- Conduct a survey and obtain an extensive job seekers' competence profile.
- Transfer, adapt and combine the materials and tools into a holistic E.guide system that will consist of a toolkit and a support system for both counsellors and job seekers.
- Test the service, tools and methods on a sample target group (20 counsellors per country),
- Evaluate, optimize the product.
- Disseminate the results; also by ensuring compatibility with the existent guidance systems and software to enable wide dissemination.

Long term effects:
E.guide will provide a new dimension to counselling, but also a more efficient way to prepare training for job seekers. With transparency of competences and facilitation of life long learning not only the counsellors', but also the general efficiency and satisfaction (of employers' and employees') will significantly increase.
Guidance counsellors will benefit from new and innovative approach and tools, greater efficiency and quality of services, less stress and consequently higher satisfaction.

Project Information

Users – job seekers will be encouraged to undertake further training through the competence based model and greater transparency and higher quality tailor-made training is facilitated for them. Since the benefits for end users are substantial, the advantages for the entire economy can be expected (higher employability, better career management and thus higher productivity of employees.
After the project's lifetime, regional and/or nation-wide integration of E.guide into the existing guidance services in Slovenia, France and Sweden is expected.

Themes: *** Labor market
** Vocational guidance
* Open and distance learning

Sectors:

Product Types: website

Product information: E.guide portal is an integrated system with a selection of tools for identification and adaptation of competences, necessary for the job seeking process. It offers reliable tools and methodological approaches that enable efficient work with the users. With the permission of the job seeker, the counsellors has access to the individual's data and is able to help them trough a modular and individual approach that will answer their specific needs and bridge the identified competence gaps. The portal also contains many useful links not only for the users but also for the counsellors.
