Project Information

Title: Metaframework for Logistics

Project Number: DE/13/LLP-LdV/TOI/147618

Year: 2013

Project Type: Transfer of Innovation

Status: completed

Country: DE-Germany

Marketing Text: The aim of the METALOG project was the development of a sectoral qualifications framework for logistics qualifications in Europe. In order to accomplish this, the requirements for current and future job roles were analysed. The results of this research were presented to a specific public and pursued in the context of a "European Logistics Skills Network ".
In this way, the corner stone for a Knowledge Skills Alliance in Logistics was laid so that the gap between company requirements and employee qualifications can be better addressed. This will, in turn, contribute to the reduction of unemployment in Europe.

Summary: In a number of previous projects (Central, Eucolog, Prolog,Novalog, Eurotranslog, ProfDRV), the connection between vocational qualifications and relevant transparency instruments has been examined.
The METALOG project has analysed these previous results and summarized them systematically (see Products "Synthesis Report"). Based on these results, work process analyses have been conducted in logistics companies in the process of which human resource (HR) personnel and relevant employees in the sector have been interviewed with a view to better understanding the gap between the requirements of organisations and the actual competences of employees. The results of these WPA were summarised and discussed at the project meeting in Salzburg (January 2015). Based on the results of both the synthesis of previous projects and the work process analyses, a Logistics Qualifications Framework were drafted by ITB. To ensure sustainability of the results, logistics and HR personnel, training organisations and industry associations, etc. have to be brought together into a Logistics Skills Network. This network will deal with the continuously changing requirements in the workplace and thereby be in a position to identify new requirements and to provide relevant training in a timely manner.
Logistics has always been an internationalized sector. The work of such a network will therefore contribute to mobility in Europe strengthening the position of the firms in the sector as the increasing the quality of the work performed.

Description: All project partners possessed high-level know-how in the area of logistics thereby ensuring that the project goals can be achieved: training providers, stakeholders, institutions of higher learning and commercial organisations.
The countries with strong logistics sectors were represented in the project consortium.
This transfer-of-innovation project had strong ties not only to relevant projects (Central, Eucolog, Prolog,Novalog, Eurotranslog, ProfDRV), but draw strongly on the methodology developed in the Matching Frames project, successfully led by ITB Bremen, in which a sectoral qualifications framework for the automotive sector was developed. Work package 1 run throughout the project and covered project management. Work package 2 delivered a detailed and structured summary of the previous project results which lead to the development of a first draft of the sectoral qualification framework in work package 3. Such a framework is both abstract and theoretical by nature. Consequently, work package 4 attempted to bridge the gap to actual, applied logistics practice. After the completion of the consultations conducted in this work package the qualification framework was finalized. The primary instrument for the implementation of the projects results was the development of national implementation scenarios in work package 5 (Exploitation). At the same time, an action plan for establishing a European Logistics Skills Network was worked out.
The centrepiece of work package 6, Dissemination, was the international conference with the title "Education meets HR (human resources)". Here, personnel development

Project Information

specialists from industry were brought together with relevant training providers.
In work package 7, internal and external evaluations ensured the productive cooperation among the partners and the production of high quality deliverables throughout the project lifetime.

Themes: *** Social dialog
** Enterprise, SME
* Labor market
* Lifelong learning
* Vocational guidance

Sectors: *** Transportation and Storage
* Education

Product Types: program or curricula
transparency and certification
website
procedure for the analysis and prognosis of the vocational training requirement
Film

Product information: The consortium has held five project meetings and the final conference in 2015. The results of the work packages has been summarised in the form of reports and guidelines.
Further information and products can be found on the project website.

Logistics Qualification Framework.pdf

http://www.adam-europe.eu/prj/11104/prj/Logistics%20Qualification%20Framework.pdf

The draft Logistics Qualifications Framework (LQF) suggested by the project METALOG is based on real work processes. These were surveyed in the framework of a work process analyses in the project partner countries as well as in previous studies. A first draft of the LQF was discussed and evaluated by logistics experts in the project partner countries; then a revised version was developed.

Product 'Metalog website'

Title:	Metalog website
Product Type:	website
Marketing Text:	The Metalog project website serves as the major point of reference for all activities related to Metalog and as online business card for the project.
Description:	The Project Website presents the objectives of the project and the results delivered so far. All public results are available for download. For internal communication a internal area is available.
Target group:	VET experts all over Europe
Result:	
Area of application:	
Homepage:	www.project-metalog.eu
Product Languages:	English German

Product 'Sustainability plan for previous project results, Del. 06'

Title:	Sustainability plan for previous project results, Del. 06
Product Type:	others
Marketing Text:	This report provides an overview and a comprehensive analysis of prior EQF/ECVET related projects in the transport and logistics sector.
Description:	The METALOG project work is based on existing results, concepts and approaches that are to be adapted, transferred, embedded into new developments and sustainably established at European level. The work plan applied in this project follows a four-stages process: 5.1. identification of relevant and transferrable results - WP2 5.2. adaptation and development of the existing approaches/results for the development of sectorial qualifications frameworks for Logistics (Logistics Qualifications Framework) – WP3 5.3. testing of results and finalization of project products – WP4 5.4. sustainability process, by embedding and integrating project results in European and national systems and networks – WP5
Target group:	All those how are interessed to make use of the results of previous Projects and experiences in logistics project
Result:	The Report summarizes the core results of the majoroty of Projects in the sector on a common Basis.
Area of application:	The Report should be the starting Point of new ideas and Projects.

Product 'First draft of a sectoral qualification framework, Del. 07'

Title:	First draft of a sectoral qualification framework, Del. 07
Product Type:	evaluation methods
Marketing Text:	A sectoral Framework aims to solve Problems araising by the implementation of national qualification Frameworks: There is no link to the sector and the existing competencies of the individuals.
Description:	Based on studies within other Projects the the Project decided to follew the Approach of identification of core-work-processes as a starting point for a sectoral qualification Framework. Based on the results of Del. 06 and desk research a questionnaire for anaylsis in the companies was develloped. As a results of the studies in companies the first draf was elaborated.
Target group:	Experts in the field of NQF, EQF and SQF
Result:	File "Einführung" bescribes the methodology of the project. The Logistics Qualfications Framework as a draft summarize three different Levels of competences within 10 core work processes.
Area of application:	Development of sectoral qualification frameworks

Product 'Guidelines for referencing the sectoral qualifications framework to the EQF and NQFS, Del. 08'

Title:	Guidelines for referencing the sectoral qualifications framework to the EQF and NQFS, Del. 08
Product Type:	others
Marketing Text:	In the initial Metalog project plan was announced to develop two kinds of guidelines as deliverable n°8: a) a guideline for referencing the LQF to the European Qualifications Framework and b) a guideline for referencing the LQF to National Qualifications Frameworks.
Description:	The first guideline appeared to be redundant and therefore not necessary. As the project consortium decided at the start of the project to develop the Logistics Qualifications Framework on the basis of the EQF, the core work processes in the LQF are directly referenced to the EQF levels using the EQF descriptors. That means, referencing any work process which is covered by the core work processes directly to the EQF should automatically result in the same EQF level as the level found in the LQF
Target group:	Project partner

Logistics Qualification Framework.pdf

http://www.adam-europe.eu/prj/11104/prd/7/1/Logistics%20Qualification%20Framework.pdf
The draft Logistics Qualifications Framework (LQF) suggested by the project METALOG is based on real work processes. These were surveyed in the framework of a work process analyses in the project partner countries as well as in previous studies. A first draft of the LQF was discussed and evaluated by logistics experts in the project partner countries; then a revised version was developed.

Product 'Testing plan/Consultation Guidelines, Del. 09'

Title: Testing plan/Consultation Guidelines, Del. 09

Product Type: evaluation methods

Marketing Text: The testing plan guarantees the development of the Framework on a scientific Level. He is the common understanding of the project partners

Description: The aim of the consultation process in the context of work package 4 is to test and verify the applicability, validity and relevance of the Logistics Qualifications Frame-work (LQF) among its target groups. The potential impact and possible gaps of the LQF shall be identified, so to ensure that the final version of the LQF takes into ac-count all needs of the target groups. On the basis of the results of the consultation process the LQF will be adapted and finalized.
The testing plan shall serve as guideline for the consultation process. In the following the methodology and design of the consultation process is described in detail, includ-ing a testing plan for the national workshops, key questions for the workshops and for expert interviews, as well as the description of the methodology of a web-based survey.
The consultation guidelines shall support partners in conducting national workshops, expert interviews and spreading the web-based questionnaire among the target groups of the consultation process

Target group: project partner

Result: The table of Content mirrors the results of the study quite well:
1. Aim of the consultation process and the testing plan 1
2. Design of the consultation workshops 1
2.1. Invitation policy / target groups of the consultation process 1
2.2. Preparatory material 2
2.3. Recommendations for the procedure 4
2.4. Alternative to national workshops: conduction of expert interviews 5
2.5. Documentation 6
3. Key questions 6
4. Web-based survey 10
5. Time schedule for work package 4 10
6. Overview of results of work package 4 10
7. Division of tasks 11
8. National consultation plans

Area of application:

Product 'WP4 – Final Report – Draft, Del. 10,11,12,13,14'

Title: WP4 – Final Report – Draft, Del. 10,11,12,13,14

Product Type: others

Marketing Text: This report summarizes the results of the national consultations and national Workshop analyzing and discussing the draft of an LQF.

Description: The consultation process in the context of workpackage 4 of Metalog intended to test and verify the applicability, validity and relevance of the previously developed Logis-tics Qualifications Framework (LQF) among its target groups. The objective was to identify the potential impact and possible gaps of the LQF in order to ensure that all needs of the target groups were taken into account within the final version.
This report includes first the initial testing plans describing national evaluation strategies for each partner country. They refer to the application of three different evaluation methods: national and in-company workshops, expert interviews and a web-based survey. The results of these methods applied to the individual context of each partner country are the core element of this report. The national partners were free in identifying the core results of their evaluation efforts. For this reason, the evaluation design as well as the presentation of its results can slightly differ between the single countries. An overall conclusion is placed in the end of this report in order to give hints to the consideration of the evaluation results and to possible conse-quences for the main product of Metalog – the Logistics Qualifications Framework.

Target group: project partners

Result: From the the workpackage leader´s point of view, there are three different types of results:
_ results on details of the LQF (e.g. placing specific work processes on a dif-ferent EQF-level)
_ results on more general aspects of the LQF (e.g. integrating additional work processes)
_ results on the general scope of the LQF

Area of application:

Product 'Final logistics qualification framework, Del. 15'

Title: Final logistics qualification framework, Del. 15

Product Type: others

Marketing Text: The draft Logistics Qualifications Framework (LQF) suggested by the project METALOG is based on
real work processes. These were surveyed in the framework of a work process analyses in the project
partner countries as well as in previous studies. A first draft of the LQF was discussed and evaluated
by logistics experts in the project partner countries; then a revised version was developed

Description:

Target group: experts in the field of logistics or VET

Result: As a result, nine core work processes have been identified:
1. Handle incoming goods and related information
2. Transload, repack, store and retrieve goods
3. Pick and pack orders
4. Handle outgoing goods and related information
5. Control and administrate goods and shipment
6. Draw up offers and prepare contracts, supervise customer-relations
7. Organize and implement the shipment and storage of goods
8. Monitor and enhance the efficiency and range of services offered by company
9. Plan and schedule resources
The matrix with the fields of competencies displays a detailed description of the core work processes. It differentiates each work process into three degrees of complexity. The matrix is basis
for assigning of the core work processes to the levels of the EQF.

Product 'Results of national scenarios, Del. 16,17,18,19'

Title: Results of national scenarios, Del. 16,17,18,19

Product Type: others

Marketing Text: There is not one way to the implementation of a logistics qualification framework in a national VET-System. The Report describes in a Brief form the differnt Scenarios of implementation which may arise.

Description: The national scenarios for the implementation of the LQf were designed to provide a clear understanding of the environment in which the LQF can be introduced in each partner country. To
reach this goal partners have provided a description of the situation in peach country, notably with
regards to:
The existence of an NQF/SQFs
The NQF/SQFs' aility to reflet ork proesses
The variety of Logistics-related qualifications existing each country
The ability of the NQF/SQFs to sere the Logistis setor's eeds
The nature of the institutions that have been responsible for the introduction of the NQF in each partner country
The most relevant stakeholders involved in the process of the introduction of the NQF/SQFin each country

Target group: VET experts in Europe

Result: 6 national scenarios for the implementation of the LQF
Action plan for the consolidation of a European logistics stakeholder Network
Individual business plans of partners to sustainably promote the LQF and the European logistics Network
target group-specific guidelines for using the LQF (HR/ training departments of logistics companies, training providers, individuals)

Final conference in Hamburg

Date	15.09.2015
Description	The Logistics sector is one of the most important European sectors (employing around 10 million people) and the one experiencing the biggest changes caused by globalization, technological progress and advanced business processes which see logistics operating across global supply chains. Most recently, the increased digitalisation of work processes in the framework of the fourth industrial revolution has reinforced these developments. These changes have a huge impact on the labour market and the knowledge and skills required by the logistics workforce of the future. The project METALOG has developed a Europe-wide Logistics Qualifications Framework which will serve the logistics sector as a reference tool in their recruitment activities on the one hand, and as a useful tool for the development of career and learning paths for the various occupational profiles within logistic companies on the other. In addition, the METALOG project lays the foundations for a European stakeholder network on qualifications within the Transport and Logistics sector. The network includes stakeholders at a political level, social partners, experts and training providers, as well as representatives of logistics companies.
