Table of contents

1. Work Package 2 - background 3
2. Preparation of the reports 3
3. Outputs 5

1. Work Package 2 - background

The main objectives of work package no. 2 are as follows:

- standardization, analysis and compilation of current knowledge about renewable energy systems used in buildings, energy efficient renovation of old buildings, current market condition, national regulations and key supplier of materials and installations as well as training institutions and existing courses in the participant countries (Czech Republic, Italy, Poland and Spain),
- identification of companies potentially interested in this type of course on energy efficient renovation of old and historic buildings,
- analysis of the present vocational education systems in four partner's countries.

Main tasks to do:

- preparation of standardized templates for collecting data and information.
- gathering a current knowledge and information about sector companies from each partners

Results:

- unified templates to standardize knowledge compilation,
- list of companies potentially interested in this type of training,
- list of specific training institutions and courses in the chosen sector,
- explanatory report on WP 2.

2. Preparation of the report

Three special designed separate templates have been prepared for gathering of information and data. Templates were needed for unification of work of all partners as well as making easier the preparation of comprehensive analytical report about market condition, companies involved potentially interested in the course as well as education and training institutions.

1. Template: /ETEROB - Energy conservation in construction industry.doc/
   The main purpose of this template was to compile data and information about the following issues:
   - Construction industry characteristics,
   - Legislative background,
   - Standards for energy efficient buildings,
   - Key suppliers of renewable energy systems,
   - Key suppliers of energy efficient materials

2. Template: / ETEROB - List of companies potentially interested /
   The main purpose of this template was to compile data and information about the following issues:

- general information: company name, address, number of employees and year of establishment,

- main activity: type of company, type of activity, type of education, type of educational institution, type of the future exploitation.

This template is used for gathering information about companies potentially interested in the course.

3. Template: / ETEROB - List of courses available on the market.doc /
   The main purpose of this template was to compile data and information about the following issues:

- brief information about the structure of educational system, both formal and informal,
- list of institutions involved: general information (company name, address, number of employees, year of establishment), main activity (type of company, type of educational institution, list of courses offered on renewable energy systems and materials for construction industry, list of courses offered on construction management).

All templates were used by each project partner for gathering appropriate data and information. As a result all the information and data have been compiled in a form of one comprehensive report that is available in English language.

Results:

Partner	Number of questionnaires received	
	Companies interested in	Educational Institutions
Czech Rep. – NorthCom	6	4 institutions
Italy - FMS	25	11 institutions
Spain - CISER	64	6 institutions
Poland – BSW/Inventi	15	13 institutions

3. Outputs

Relation between the results of tasks performed in Work Package 2 is shown in table below:
