EQF Code: Transférer et appliquer les instruments European Qualification Framework et e-Competence aux professions du Multimédia dans le cadre du Développement de Contenus

DE/08/LLP-LdV/TOI/147177

http://www.adam-europe.eu/adam/project/view.htm?prj=3791

Information sur le projet

Titre: EQF Code: Transférer et appliquer les instruments European Qualification Framework et e-Competence aux professions du Multimédia dans le cadre du Développement de Contenus

Code Projet: DE/08/LLP-LdV/TOI/147177

Année: 2008

Type de Projet: Projets de transfert d'innovation

Statut: Clôturé

Pays: DE-Allemagne

Accroche marketing: Le fondement du projet est la constatation, continuelle, du manque de main-d'œuvre qualifiée qui se fait sentir dans le monde du Multimédia, dans de nombreux pays européens (ex : Allemagne, France, Suisse, Hongrie...). Cette pénurie affecte gravement certains secteurs du développement de contenu (Jeux en ligne, Enseignement à distance, autres développements de contenus multimédia).

Cette pénurie de main d'œuvre qualifiée pourrait être dépassée en employant des spécialistes venant d'autres états membres. Cependant ceci est entravé par le manque de transparence, et la difficulté à comparer les qualifications pour ces emplois au niveau européen. En raison de la grande diversité des systèmes de formation professionnelle, au travers de l'Europe, ainsi que de la variation importante des besoins et des nécessités du secteur, il est souvent impossible pour les entreprises Multimédia, cherchant à employer des professionnels étrangers, de déterminer les compétences et savoir-faire potentiels des employés venant d'autres pays.

Actuellement la formation professionnelle, pour les développeurs de contenu, varie fortement d'un pays à l'autre, à la fois en termes de durée, de contenu, et de complexité. On peut constater que les développeurs de contenu, d'un pays à l'autre montrent des profils très différents, en termes de compétences et de savoir-faire, bien qu'ils exercent des emplois similaires voire des appellations de postes similaires.

Les principaux objectifs du projet sont : Analyser les profils et les qualifications actuelles dans le secteur du développement de contenu, et les décrire en termes de résultats d'apprentissage. 2. En référence aux profils de qualification définis par l'EQF, ainsi que les cadres de qualification nationaux, et utilisant les approches des programmes précédents :"CompTrain" et "Embedding Standards" 3. Déterminer un profil européen, pour les développeurs de contenu et 4. Basé sur ce "profil idéal" développer des documents de référence pour les entreprises et des recommandations pour les organismes de formation, pour qu'ils puissent adapter en conséquence leurs formations au secteur du développement de contenus.

Résumé: Rationale of this project was the continuously growing skills shortage in the Multimedia sector in several European countries (e.g. Germany, Hungary, Switzerland), which specially affects the field of content development (e-game development/ e-learning content, Multimedia content development). This skills shortage could be overcome by employing practitioners from other European member states. However, this is hampered by the lack of transparency and comparability of qualifications for these professions at European level. Due to the great diversity of vocational training systems across Europe and the fast changing training requirements and needs of the Multimedia sector, it is often impossible for Multimedia companies intending to employ practitioners from other European countries, to determine the real professional competences and skills of potential employees from abroad. Currently, the vocational training for content developers varies exceedingly between EU member states in duration, content and complexity. Hence content developers across Europe show very different competence and skills profiles, although they often hold quite similar job or qualification titles.
The main objectives of the project therefore were: 1. Analysing the current qualification profiles in the field of content development and describing them by

Information sur le projet

learning outcomes. 2. Referring the determined qualification profiles to the EQF, to the national sectoral qualification frameworks and the qualification frameworks developed at European level by using approaches developed in the previous projects "CompTrain" and "Embedding standards". 3. Determine a comprehensive European qualification profile for content developers, and 4. based on this "ideal profile" develop reference material for entreprises and guidelines for training institutions so that they can adapt their training offers in the field of content development accordingly. The project EQF-Code will take up the problem of the shortage of skilled Multimedia professionals at European level. It will analyse the training standards in the field of content development in the participating European countries, provide national qualification descriptions (by learning outcomes) and will refer them to the EQF so that qualifications in the field of content development will become more transparent and comparable (refers to priority 3 of the current LdV Call). Thus, the employability of content development professionals will be improved across Europe and their professional mobility will be facilitated (refers to general objectives of the LLP). Furthermore, the project partners will provide suggestions for training modules in this field, advising VET institutions on the content and skills that should be trained for professions in the field of content development. This will improve the training quality in VET in this sector (refers to general programme objectives).

Target groups addressed in the project in the short term and impact:

Vocational training (VET) institutions providing training in the field of content development:
Representatives of VET institutions will be involved at all stages of the project as members of the consortium and members of the Advisory Board, so that they will provide input and suggestions to the activities carried out in the course of the project. They will benefit of the recommendations on training modules handbook that will help them in tailoring their training measures according to the real market needs.

Employers in the field of content development:
Enterprises operating in the field of content development are already involved in the project partnership as well as employers' associations and will be involved in the course of the project as members of the advisory board in order to provide feedback on the results achieved. They will benefit from the reference material which will be developed in the course of the project and which will include national qualification profiles described by learning outcomes and their respective classification in reference to the EQF as well as comprehensive European specialist profiles for professions in the field of content development. This document will enable employers to determine whether their foreign job applicants are sufficiently qualified for the job they are applying for. Thus employability across Europe will be facilitated.

Employees in the field of content development:
Employees will be addressed in the course of the project through the training institutions as well as the companies involved in the project consortium and addressed in the valorisation activities. Furthermore, the developed reference material will be evaluated and tested by these employees for final adaptations and improvement. They will benefit of the reference material by gaining insight into knowledge, skills and competencies required in other European countries in a certain job position. So they can compare their own competence profiles with the national qualification profiles identified by EQF-Code and determine whether they are sufficiently skilled regarding job specifications in other European countries or they would still need to improve their competences. This will on the one hand motivate content development professionals to further improve their skills and on the other hand facilitate their professional mobility across Europe.

The anticipated impact on the following target groups in the long term is:

Information sur le projet

VET institutions:
- Improvement of the training offers in the field of content development
- Reduced mismatch between trained competences and competences needed on the labour market
- Increased attractiveness of qualifications in the field of content development because they are referred to the various levels of the EQF
- More students, since modular training approach (with ECVET) makes further vocational training and lifelong learning in general more attractive to professionals on the labour market.

Employers/ Companies operating in the field of Multimedia/ content development:
- More transparency and comparability between qualifications in the field of content development at European level.
- Easier recruiting of appropriate staff.
- Lower inhibitions to employ qualified content development professionals of other European member states.
- Reduction of the lack of skilled Content Development professionals (skills shortage).

Employees in the area of content development:
- Comparing own competence profiles to requirements in other European countries.
- Motivation for improvement of own competences and participation in further vocational training.
- More mobility through better comparability and transparency of the competence needs in other EU member states.

Description: 1) Transfer at sectoral level
The Leonardo pilot project "Embedding standards" developed a methodology and approach how to compare different training standards at European level and how to refer national qualification profiles to the EQF. Embedding standards was focused on the ICT sector in general but did not consider Multimedia professions or the special occupational area of content development. However, the approach and methodology, which was focused on the ICT sector in general, has been transferred to the Multimedia sector "Content Development". Slight adaptations and updates were required since the EQF and especially the Multimedia-relevant sector-specific metaframework "e-competence framework" has been developed further on in the last 1 1/2 years (The project "Embedding standards" was completed in September 2006).

Thèmes:
*** Utilisation et diffusion de résultats
*** Marché du travail
*** TIC
*** Validation, transparence, certification
*** Orientation professionnelle
*** Formation continue
** Formation tout au long de la vie
** Enseignement supérieur
** Entreprise, TPE, PME
** Formation initiale

Modules
Description de nouveaux métiers

Information sur le produit: The main outcomes and results of the project are:
1. National qualification profiles in the field of content development described by learning outcomes,
2. Transfer of the methods and approaches developed in the course of the projects "CompTrain" and "Embedding standards" to link qualifications to national sectoral frameworks and the European qualification framework,

Information sur le projet

3. Comprehensive European qualification profiles for the following jobs in the field of content development: Web Designer, Web Content Developer, 2D-3D Animator, Webmaster and Web Content Manager, 4. Reference material for enterprises and guidelines for training institutions so that they can adapt their training offers in the field of content development accordingly.

By these activities transparency and comparability of qualifications in this sector will be improved and the harmonisation of qualifications at European level will be fostered. Thus, professional mobility of content development practitioners among the participating member states will be facilitated.

Titre: European Specialist Profiles in e-content development: Reference Material & Methodology

Type de Produit: Autres

Texte marketing: This document lays out the approach used by the project partners in developing the European Specialist Profiles (cf. more products). Using extensive field research, data from all participating countries were collected and then, following the present methodology, harmonised and made more transparent in order to form the European Specialist Profiles. This methodology can be transferred to other projects wanting to gather information on various professions in the Multimedia sector and compiling them into comprehensive qualifications profiles.
This very complex approach is explained in detail in the reference material.

Description: Detailed explanation and suggestions for an approach of linking existing qualification profiles to frameworks, e.g. the European Qualifications Framework EQF, the e-Competence Framework eCF and ECVET.

Disclaimer:This project has been funded with support from the European Commission.

This publication reflects the views only of the authors, and the Commission cannot be held responsible for any use, which may be made of the information contained therein.

Cible: All stakeholders interested in using a similar approach to link qualification profiles to the above mentioned frameworks.

Résultat: Possibility for stakeholders to link profiles from multimedia jobs with the EQF and other frameworks by using and adapting this methodology.

Produit 'European Specialist Profiles in e-content development'

Titre: European Specialist Profiles in e-content development

Type de Produit: Description de nouveaux métiers

Texte marketing: After extensive field research in 7 European countries five qualification profiles in the field of e-content development have been set up and been linked to the European Qualifications Framework EQF as well as the e-competence framework (ecF). Very detailed job profiles for the core professions of Web designer, Web content / Multimedia developer, Digital animator / 2D-3D specialist, Webmaster and Web Content Manager are available in this document.

Description: Set of very detailed European Competence Profiles for 5 Core e-Content professios:Web designer, Web content / multimedia developer, Digital animator / 2D-3D specialist, Webmaster and Web content manager.

Disclaimer:This project has been funded with support from the European Commission.

This publication reflects the views only of the authors, and the Commission cannot be held responsible for any use, which may be made of the information contained therein.

Cible: All stakeholders in describing qualifications profiles in the underlying and linked sectors, in setting up curricula for vocational education (also cf. Handbook / Guidelines in the products section), for developping European-valid assessment and certification procedures, for linking qualification profiles to existing frameworks and last but not least, representatives of the industry for assessing applicants' qualifications in an European context.

Résultat: Detailed and comprehensive Qualification Profiles linked to the existing European frameworks.

Domaine d'application: Development of vocational training, development of certification procedures, harmonisation of vocational education in Europe.

Produit 'European Specialist Profiles in e-content development: Handbook'

Titre: European Specialist Profiles in e-content development: Handbook

Type de Produit: Procédure pour l'analyse et le pronostic des besoins de la formation professionnelle

Texte marketing: The training guide is based on the results of extensive research within the EQF Code project and is intended to offer guidance for European training institutions and all people involved in drafting curricula for vocational training in the field of e-content development. The guide, which is conform with EQF, eCF and includes suggestions for the attribution of ECVET points to the five analysed professions, serves as a recommendation for a European-wide harmonisation of qualifications in the field.

Description: The guide is intended to serve as support for anyone involved with the setting up of curricula in vocational education in the e-content development sector. The European Specialist Profiles (cf. other products) served as a base for compiling the output-oriented qualifications profiles at hand. Each profile is split up into learning units including required knowledge, skills and competences and includes not only references to the EQF and eCF frameworks but also suggestions for the attribution of ECVET credit points. Specific job profiles covered are: Web Designer, Web Content / Multimedia Developer, Digital Animator - 2D/3D Specialist, Webmaster and Web Content Manager.

Disclaimer: This project has been funded with support from the European Commission.

This publication reflects the views only of the authors, and the Commission cannot be held responsible for any use, which may be made of the information contained therein.

Cible: Individuals involved with setting up curricula for vocational training offers in the e-content development sector.

Résultat: 5 extensive job qualifications' profiles which can be used for future reference when setting up curricula in the field of e-content development.

Domaine d'application: Especially training institutions can benefit from this document as it serves as a helping recommendation for setting up European-valid curricula.

Date et lieu	19 March 2010, Hotel Lyskirchen, Cologne, Germany

Événements

Fourth Project Meeting EQF Code

Date	07.01.2010
Description	Achievements and review of the workpackages 2, 3, 4 and 5 (European specialist profiles for five professions in e-content development, reference material on the methodology, recommendations for training modules, allocation of e-CF levels, EQF-levels, ECVET points, evaluation of reference material and training guide). Discussion of results with members of the advisory board and other invited experts. Status Quo of work package 6 (dissemination activities), as well as detailed planning of the final project conference in Cologne on 19th March 2009 during the Didacta fair.
Cible	Project Partners and members of the Advisory Board
Public	Événement non public
Informations de contact	adriana.gluhak@md-pro.de
Date et lieu	07 January 2010 14:00 - 17:00 o'clock and 08 January 2010 09:30 - 16:00 o'clock Austrian Federal Economic Chamber Institute for Economic Promotion, Vienna, Austria

Third Project Meeting EQF Code

Date	09.10.2009
Description	Discussion of the results of workpackages 1 and 2, general progress since last meeting (field research and classification of national qualification profiles, streamlining the researched professions). Presentation of a detailed workplan for workpackages 3 and 4 as well as discussion of ongoing translation and dissemination activities.
Cible	Project partners and members of the Advisory Board
Public	Événement non public
Informations de contact	adriana.gluhak@md-pro.de
Date et lieu	09 October 2009, 09:00 to 16:30 o' clock, Vevey, Switzerland

Événements

Second Project Meeting EQF Code

Date	02.03.2009
Description	Achievements and review of the first five months of the project. Further planning of the first workpackage of the project, discussion of adapatations needed for the next six months.
Cible	Project partners and members of the Advisory Board
Public	Événement non public
Informations de contact	adriana.gluhak@md-pro.de
Date et lieu	02 March 2009 from 10:00 to 16:00 o'clock, Göttingen

Kick-off-Meeting EQF Code

Date	07.11.2008
Description	Briefing of all participants on the project objectives, roles of the project partners and the approach and methods to be tranferred in the course of the project. Furthermore, informing partners on the activities to be carried out in the next five months.
Cible	Project partners and members of the Advisory Board
Public	Événement non public
Informations de contact	adriana.gluhak@md-pro.de
Date et lieu	07 November 2008 from 9:30 to 17:00 o'clock, Munich-Ismaning
