Activities/ Tasks	Deadlines, partner in charge, outcomes
Defined the tools of the platform LMS: • Course Description • Agenda • Announcements • Document and links • Excercise • Learningh path • Forums • Users	-
The startup quizzes are hidden once performed.	-
There will be one final quiz and one start up quiz for each module, in order to facilitate the user. The final quiz will appear only when the student will fill in all the start up quizzes of a module.	-
After completing a startup quiz, the coach bot can deliver two messages: 1. "You can go for the learning path": If at least one answer is wrong 2. "Congratulations, your form is optional, but you can ...": if all the answers are correct. However, the LMS must pass a variable to the VC with two possible values depending on the response to be given.	-
Each time the user logs on to the VC tool, gives a short welcome message: "Hello, you are in the section ... If you want more info ask me". On request, the coach provides more information in help desk feature.	-
After the interview guidance, the VC passes to LMS three variables to define the user profile (see example guidance interview part 3). The LMS will process these variables to define the unique profile of the user (ID1, ID2, ..., ID18).	-

The VC will present the results of the state of the student's study. Then, it passes back to a page where you will see the completed forms and complete.	-
The suggestions of the VC will exploit the glossary built-in within the AIML. For the moment, whin the LO will not be present any link.	-
Regarding the text of the responses of the VC, should be controlled by two control groups to find partners in the project: 1. a group for the control of correctness at the linguistic level 2. group to control the contents accuracy.	-
