Project Information

Title:	ProInterNet - PIN
Project Number:	504025-LLP-1-2009-1-ES-LEONARDO-LNW
Year:	2009
Project Type:	Networks
Status:	running
Country:	EU-Centralised Projects
Marketing Text:	The latest OECD IT report 2008 states that "ICT skills are an important contribution to growth […] Over 4% of total employment is in ICT specialist occupations." At the same time, job profiles have not or only been partially defined and change rapidly. This causes barriers to take up job opportunities and a lack of suitably skilled workforce. To keep pace with technological development, training opportunities must be continuously monitored and up-dated to guarantee a well-functioning labour market. With this in mind, PIN, a network project aiming at improving transparency, information and guidance systems with regard to competences and qualifications at European level for Internet professions is fully in line with Leonardo work programme specific objectives. Through its Internet Job Observatory it will use state-of-the-art participative, Open Source technology for the easy access of all relevant information for the benefit of all interested stakeholders all over Europe.
Summary:	PIN is a network project that will contribute to the main objectives of the Leonardo program as laid down in policy documents, starting with the Copenhagen process. In particular, its aim is to improve the transparency, information and guidance systems with regard to competence and qualifications at European level for Internet professions. The PIN project will do this in bringing together complementary players such as VET, HE, certification organizations, jobs and enterprise associations for a proactive and continuous knowledge exchange in the area of Internet jobs. All this is going to be done, creating a network of key players in the area of Internet-related skills in SMEs involving: 1. industry intermediary organizations; 2. VET institutions; 3. public authorities and, 4. a leading certification institute in order to set-up a holistic approach of assessing, standardizing and certifying job qualifications and profiles for internet-related jobs in SMEs.
Description:	PIN will improve employability, reduce skills shortages on the EU labour market, improve the quality of VET and make VET in the field of ICT more transparent and comparable at European level. Thus, all target groups addressed by the network project will benefit. By continuously involving relevant stakeholders throughout the project phase, a true critical mass will be reached. Objective 1: To help promote creativity, competitiveness, employability and the growth of an entrepreneurial spirit PIN supports this objective in identifying new Internet professions, skills and competencies needed and training available in 7 EU countries. The findings will be synchronized at all levels – VET, industry, public institutions etc. – to create a level playing field to improve competitiveness (SMEs), employability (workers) and growth of entrepreneurial spirit (all involved). An Internet Job Observatory using OS participative technology provides easy access for all interested. Objective 2: To support improvements in quality and innovation in vocational education and training systems, institutions and practices PIN supports this objective in identifying and matching the needs of skills and competencies for Internet professions (bottom-up approach) with the training available (top-down). VET curricula that correspond to the market needs will receive the “label of industry-compliance” that will eventually lead to certification and normalisation of training outcome. This contributes to improve the quality of VET systems, notably at European level. Objective 3: To improve the quality and to increase the volume of cooperation between institutions or organisations providing learning opportunities, enterprises,

Project Information

social partners and other relevant bodies throughout Europe
To achieve the goals of LLP and in particular, Leonardo, a continuous collaboration among all stakeholders is necessary. The PIN partners look back at successful collaboration in this area that it now plans to deepen and enlarge towards all stakeholders. This will not only be achieved through the actual partners but through the networking activities that go beyond, in order to reach a critical mass, all supported by the on-line platform for ubiquitous access.

Objective 4: To improve the transparency and recognition of qualifications and competences, including those acquired through non-formal and informal learning.
This objective is at the core of the PIN network. Internet job profiles change rapidly or have not been identified in the first place. Thus, identification and “harmonization” of required skills and competencies are a first step that subsequently leads to recognition of acquired knowledge and finally, qualifications. This is crucial for a balanced and well-functioning European labour market in these increasingly important jobs.

Objective 5: Stakeholder networks
PIN builds upon real collaboration of 4 of the consortium's partners and most of the associated partners, and adds to this additional stakeholders in the area of Internet professions, qualifications and certification. The thus created network will be complemented by proactive networking initiatives such as the Round Tables (WP4) that will unite additional stakeholders in the private and public sector and identify trends and skills requirements in the job area.

Objective 6: Promoting an awareness of the importance of cultural and linguistic diversity within Europe, as well as of the need to combat racism, prejudice and xenophobia
The PIN activities promote the cultural diversity inherent to new professions such as Internet jobs. The identification of them, their skills and competences necessary and their reflection in training curricula will be able to compare differences and common traits and thus, distill common denominators for a balanced labour market.

Objective 7: Recognition of qualifications
In identifying skills and competencies for Internet jobs and training curricula, PIN will support the endeavour to recognize skills and qualifications. These job profiles are changing rapidly, or have not been identified in the first place which causes barriers in the labour market, from both sides, employers and job seekers. Thus, PIN will monitor all levels and thus, help that VET keeps track with the changing technological landscape that eventually determines needs of the labour market.

Objective 8: Employment
The OECD IT report 2008 states that "over 4% of total employment is in ICT specialist occupations, over 20% in intensive ICT-using occupations". Thus, it is evident that PIN is an important step stone for the European labour market as its results will help employability cross -border of specialist trained in Internet jobs, and put into place tools (like the industry-compliance label) to make VET market-near.

Objective 9: Lisbon partnership for growth and jobs
As can be seen from the above explications, PIN fulfills en elementary task in creating a network for Internet-jobs and thus, contribute to the growth of an important labour sector of the future.

Themes:
*** Utilization and distribution of results
*** Labor market
*** ICT
*** Lifelong learning
*** Recognition, transparency, certification
*** Continuous training
*** Initial training
** Sustainability

Project Information

	* Enterprise, SME
Sectors:	*** Administrative and Support Service Activities *** Information and Communication
Product Types:	procedure for the analysis and prognosis of the vocational training requirement transparency and certification distribution methods
Product information:	The outputs, results and products will be: 1. Strong and lasting links between complementary institutions; 2. Normalized job profiles / qualifications / educational content definition processes; 3. A supporting web-based information exchange platform; 4. Recommendations to stakeholders.

A dialogue with industry has led the e-Jobs Observatory to establish a set of principles
which provide a framework within which training and personnel development in the field
of Internet-related jobs can be promoted. Any organization, from professional association
to global player, from public-sector institution to private-sector training and education provider should be able to subscribe to these basic principles, as they form the basis of the e-Jobs Observatory Label of Excellence (LoE)

This proposed CEN Workshop Agreement has been drafted as part of the ProInternet (PIN) Thematic Network Project, Agreement no. 2009-2204/001-001, under the auspices of the Leonardo da Vinci Programme. The scheduled project duration was from

Project Files

January 2009 through December 2012.

Its purpose is the standardization of functional role profiles for Internet-related work which are based, in part, on the European eCompetence Framework (eCF). Furthermore, it intends to improve the quality of vocational education and training (VET) related to these profiles through a standardized approach as established by the development and review procedures defined herein.

Product '1.1 Synthesis Report on Internet-Related Jobs'

Title:	1.1 Synthesis Report on Internet-Related Jobs
Product Type:	procedure for the analysis and prognosis of the vocational training requirement
Marketing Text:	Synthesis Report on internet-related jobs: An assessment of the needs in the internet industry and the offers in regard to training and education.
Description:	The report includes a working definition of "internet jobs" in general, a quantitative and qualitative analysis of the current and prospective needs of SMES in the internet industry in the participating partner countries with regard to competences of employees and the training and education offer in the field.
Target group:	The state of the art analysis is aimed at all target groups of the PIN network, that is VET institutions, enterprises, intermediary organisations, certification and labelisation organisations as well as the individuals active in internet jobs.

Product '4.3 Compendium of Roundtable Reports (1st. round)'

Title:	4.3 Compendium of Roundtable Reports (1st. round)
Product Type:	others
Marketing Text:	The report presents the results that were obtained from the first round of meetings carried out in seven EU countries as part of the tasks of the ProInterNet (PIN) project.
Description:	The main objective of the roundtables was to get feedback regarding the current situation in the field of e-jobs, taking into account the needs, current and future requirements, training offer for this sector, and recruiting process of SMEs. These meetings also were supposed to help understanding what the best way to optimize the labelisation, certification and normalization process in this field could be. Additionally, the question of how SMEs perceive and value this kind of process was one area of interest.
Target group:	1. industry organisations which have in-depth experience of e-Jobs, Internet-related jobs and direct access to SMEs (technology suppliers and users); 2. VET institutions with a focus on e-Jobs and Internet-related jobs; 3. relevant public authorities and intermediary organisations.
Result:	Compendium of results found at the roundtable meetings.

Product '4.4 Final Consolidated Report on roundtable meetings'

Title:	4.4 Final Consolidated Report on roundtable meetings
Product Type:	others
Marketing Text:	The second series of roundtable meetings, "Bridging the gap between market needs and training outcomes – seizing the opportunity of e-Jobs" as part of the tasks of WP4 of the PIN project took place in the participating countries during the first semester of 2012. They counted with the participation of training institutions, representatives of the ICT industry, and government authorities. The meetings addressed the results that have been produced by the project team during the last year, mainly, the e-Jobs Observatory platform (www.e-jobs-observatory.eu), the final versions of the model e-Jobs profiles, the training guidelines for e-Jobs, the e-Jobs Label of Excellence (labelisation process) and the Seal of Market Compliance (certification process), as it was agreed by the Consortium in order to obtain feedback from the participants.
Description:	The present document compiles the results, main conclusions and recommendations gathered in the countries that carried out the PIN meetings, with the objective to validate the different results of the project or take the necessary corrective measures to fulfil the expectation of the key stakeholders.
Target group:	ICT Industry, Government Institutions and VET Organizations
Result:	Report of the results of the RT meetings
Area of application:	for improvement in the field of e-skills, e-competences for e-Jobs Professions
Homepage:	http://www.e-jobs-observatory.eu/

Product '2.3 e-Jobs Observatory Platform (fully functional web 2.0 platform)'

Title:	2.3 e-Jobs Observatory Platform (fully functional web 2.0 platform)
Product Type:	website
Marketing Text:	The e-Jobs Observatory is a stakeholders' network fostering collaboration and information sharing about e-Jobs, e-Skills and e-Competences.
Description:	The e-Jobs Observatory identifies and specifies the skills, knowledge and competences required for the new job profiles of the digital economy and formulates them according to a transparent and consistent methodology at European level. In parallel, it engages in a dialogue with training organisations to develop training courses meeting ICT labour market requirements. Its ultimate goal is to decrease unemployment by reducing the e-skills gap.
Target group:	SMEs of the ICT Industry, Training Institutions, Public Entities related with the Training Sector
Result:	Platform web 2.0
Area of application:	International Network

Product 'ProInterNet Project - Final Public report'

Title: ProInterNet Project - Final Public report

Product Type: others

Marketing Text: The fast evolving ICT sector is one of the most promising and economically important business sectors in the EU, contributing to a large extent to the major objective of the Lisbon agenda. The latest OECD reports on ICT regularly highlight that "ICT skills are an important contribution to growth. Over 4% of total employment is in ICT specialist occupations, over 20% in intensive ICT-using occupations[...]"

The e-Skills Manifesto of 2012 points out, that employers are regularly unable to fill open positions requiring ICT skills, although the average unemployment level of young people across Europe is around 22%. The upshot is that European companies, governments and other institutions are falling behind because the workforce lacks the digital knowledge and competence required.

Description: The PIN network project has been tackling this problem by creating a network of key players in the area of Internet-related skills in SMEs involving: 1. Industry (intermediary) organisations; 2. VET institutions; 3. Public Authorities, and 4. a leading certification institute in order to set-up a holistic approach of assessing, standardising and certifying qualifications for internet-related jobs in SMEs.

Target group: ICT Industry
VET institutions
Public Authorities
Certification Bodies

Result: Final Report
