ENERGY EFFICIENCY IN THE BUILDING SECTOR: A SUSTAINABLE FUTURE

510198-2010-LLP-IT-LEONARDO-LMP

http://www.adam-europe.eu/adam/project/view.htm?prj=6727

Project Information

Title: ENERGY EFFICIENCY IN THE BUILDING SECTOR: A SUSTAINABLE FUTURE

Project Number: 510198-2010-LLP-IT-LEONARDO-LMP

Year: 2010

Project Type: Development of Innovation

Status: completed

Country: EU-Centralised Projects

Marketing Text: The project aims at improving energy efficiency in buildings alleviating the lack of knowledge of entrepreneurs and managers of the building industry. Specific objective will be to set up new methodologies and build up training modules in European standards concerning energy efficiency in buildings. This will be achieved by creating in partner countries, generally in Europe, an accessible training approach enriched by an e-Learning platform, visual elements simulations and interesting practices in building industry which final results will be especially in terms of: Reduction of Emission, Improved Comfort, Improved Indoor Air Quality, Quality Construction and indirectly for the owners Strong Position for High Resale Value, Easy Access to Preferred Mortgage Financing

Summary: EU Directive 2002/91/EC defines concrete goals for energy savings and for the use of renewable energies in buildings. Buildings in fact are responsible for over 40% of Europe's greenhouse gas emissions. The EnEf project aims at designing training modules and contents to be delivered to entrepreneurs and managers of the building industry. These trainings will focus on energy efficiency in buildings. The main aim of the project is to alleviate the lack of knowledge of entrepreneurs and managers of the building industry by using new methodologies and by building up modules of training in European standards trying to grasp the common points between different applications in different countries. This project aims at creating in partner countries, generally in Europe, an accessible training approach enriched by an e-Learning platform, visual elements simulations and interesting practices in building industry. In the first phase the project will analyse the gaps of the current training systems concerning energy efficiency in building as well as the lessons to be learned from the more developed systems in partner countries. This analysis will be reported and published and the training contents will be prepared on the basis of this report. The training contents will be formed of different modules.
The network of partners has been formed in order to accomplish the project tasks in the most appropriate way, including experts on environmental issues and entities with experience in European training projects. Internal partnership's material will be spread in English then each partner will translate the training material into its own language.
Construction sector is one of the largest in Europe and a major motor for development. This project will contribute to cost effective energy efficiency, reduction of emissions bringing significant emissions reductions and cost savings to Member States.

Description: The EnEf project aims at designing training modules and contents to be delivered to entrepreneurs and managers of the building industry. These trainings will focus on energy efficiency in buildings. The main aim of the project is to alleviate the lack of knowledge of entrepreneurs and managers of the building industry by using new methodologies and by building up modules of training in European standards trying to grasp the common points between different applications in different countries.

Themes:
*** Utilization and distribution of results
*** Labor market
*** Sustainability
*** ICT
*** Lifelong learning
*** Higher education
*** Open and distance learning
*** Enterprise, SME
*** Ecology

Project Information

	** Access for disadvantaged
Sectors:	*** Real Estate Activities *** Construction *** Water Supply; Sewerage, Waste Management and Remediation Activities *** Electricity, Gas, Steam and Air Conditioning Supply
Product Types:	modules material for open learning evaluation methods website others teaching material open and distance learning
Product information:	Local reports from the partners's countries about the "state-of-art" regarding the topic; training modules and materials; training platform; 3D virtual representation for the training platform; training pilot test; leaflets.

Product 'Project Website'

Title:	Project Website
Product Type:	website
Marketing Text:	The project aims at improving energy efficiency in buildings alleviating the lack of knowledge of entrepreneurs and managers of the building industry. Specific objective will be to set up new methodologies and build up training modules in European standards concerning energy efficiency in buildings. This will be achieved by creating in partner countries, generally in Europe, an accessible training approach enriched by an e-Learning platform, visual elements simulations and interesting practices in building industry which final results will be especially in terms of: Reduction of Emission, Improved Comfort, Improved Indoor Air Quality, Quality Construction and indirectly for the owners Strong Position for High Resale Value, Easy Access to Preferred Mortgage Financing.
Description:	Project website will be the major platform for dissemination and exploitation activities. It will be developed gradually starting in the Month 1 of the project and will contain: general information about the project, its progress and results; • private area for project partners' internal communication. All information and materials on the public part of the website will be available in English, Greek, Italian, Slovak, German Spanish and Bulgarian.
Target group:	Stakeholders, SME's, pubblic authorities, professionals, building companies.
Result:	Project website
Area of application:	To disseminate the project, its background and evolution. To spread the results and material
Homepage:	http://www.enef-project.eu/
Product Languages:	Slovak Italian Spanish English Bulgarian Greek German

Product 'Leaflets'

Title:	Leaflets
Product Type:	others
Marketing Text:	The project aims at improving energy efficiency in buildings alleviating the lack of knowledge of entrepreneurs and managers of the building industry. Specific objective will be to set up new methodologies and build up training modules in European standards concerning energy efficiency in buildings. This will be achieved by creating in partner countries, generally in Europe, an accessible training approach enriched by an e-Learning platform, visual elements simulations and interesting practices in building industry which final results will be especially in terms of: Reduction of Emission, Improved Comfort, Improved Indoor Air Quality, Quality Construction and indirectly for the owners Strong Position for High Resale Value, Easy Access to Preferred Mortgage Financing
Description:	Project leaflets will be published in every partner countries and language, including English. They will be disseminated to the target groups, potential users and other interested organisations during conferences and other events aiming to raise awareness and motivate the target group to use the project results.
Target group:	Stakeholders, SME's, pubblic autorities and bodies, building companies, professionals.
Result:	Leaflets to present and disseminate the project
Area of application:	To raise awareness and motivate the target group to use the project results.

Product 'Conferences and seminars'

Title:	Conferences and seminars
Product Type:	others
Marketing Text:	The project aims at improving energy efficiency in buildings alleviating the lack of knowledge of entrepreneurs and managers of the building industry. Specific objective will be to set up new methodologies and build up training modules in European standards concerning energy efficiency in buildings. This will be achieved by creating in partner countries, generally in Europe, an accessible training approach enriched by an e-Learning platform, visual elements simulations and interesting practices in building industry which final results will be especially in terms of: Reduction of Emission, Improved Comfort, Improved Indoor Air Quality, Quality Construction and indirectly for the owners Strong Position for High Resale Value, Easy Access to Preferred Mortgage Financing
Description:	Project conferences and seminars will be organized during the project. They will be held in with the purpose to present project results and to raise awareness of innovation and training opportunities on energy efficiency in the building sector. Representatives of the target group, potential users and all interested in project results will be invited to participate in this conference.
Target group:	Stakeholders, SME's, public authorities and bodies, building companies, professionals, providers of energy efficiency tools and solutions.
Result:	Conferences and seminars
Area of application:	To raise awareness of innovation and training opportunities on energy efficiency in the building sector.

Product 'Training Platform'

Title: Training Platform

Product Type: open and distance learning

Marketing Text: The project aims at improving energy efficiency in buildings alleviating the lack of knowledge of entrepreneurs and managers of the building industry. Specific objective will be to set up new methodologies and build up training modules in European standards concerning energy efficiency in buildings. This will be achieved by creating in partner countries, generally in Europe, an accessible training approach enriched by an e-Learning platform, visual elements simulations and interesting practices in building industry which final results will be especially in terms of: Reduction of Emission, Improved Comfort, Improved Indoor Air Quality, Quality Construction and indirectly for the owners Strong Position for High Resale Value, Easy Access to Preferred Mortgage Financing

Description: The development of a Training Platform will provide for:
- development of a distance training system
- definition of the system of access platform to the target group of the project
- development of all the tools and support established in the Report of Training Plan definition
The e-Learning platform will be enriched by visual elements and simulations which will allow building entrepreneurs also to observe different practices in building industry in different countries, and will also allow simulations of interventions. Simulations and 3D virtual representations for learning will allow the participant to observe different practices in building industry with different energy consumption in different countries. These technologies include Web3D standards, such as VRML/X3D, the U3D specification, Java3D, custom developments using real time 3D engines and physics simulators.

Target group: Stakeholders, SME's, public authorities and bodies, building companies, professionals, providers of energy efficiency tools and solutions, managers and entrepreneures of building sector.

Result: E-learnign platform

Area of application: To provide learning courses and material developed through the project.

Product 'Training Modules'

Title: Training Modules

Product Type: teaching material

Marketing Text: The project aims at improving energy efficiency in buildings alleviating the lack of knowledge of entrepreneurs and managers of the building industry. Specific objective will be to set up new methodologies and build up training modules in European standards concerning energy efficiency in buildings. This will be achieved by creating in partner countries, generally in Europe, an accessible training approach enriched by an e-Learning platform, visual elements simulations and interesting practices in building industry which final results will be especially in terms of: Reduction of Emission, Improved Comfort, Improved Indoor Air Quality, Quality Construction and indirectly for the owners Strong Position for High Resale Value, Easy Access to Preferred Mortgage Financing

Description: On the basis of the Report of Definition of Training Plan, the training modules and the appropriate material will be designed and developed,
Doing that not only the lack, previously identified, but also the goals that are to be achieved will be taken into account. The envisaged training content will concern in general:
- features of an high energy performance building industry;
- technologies of sustainable building;
- efficient plant-engineering solutions: innovation and renewable energy sources;
- public bodies and energy policies both at European and local level, as to participating regions;
- advanced bioclimatic planning and plant-engineering solutions;
- energy certification of buildings;
The training aims at providing the entrepreneurs and managers of the building sector a normative and legislative updating as well as practical tools in order to better control and manage design planning and construction processes.

Target group: Stakeholders, SME's, public authorities and bodies, building companies, professionals, providers of energy efficiency tools and solutions, managers and entrepreneurs.

Result: Training material

Area of application: To provide training material to support the increase of skills in the topic of the project.

Product 'Training pilot test'

Title: Training pilot test

Product Type: procedure for the analysis and prognosis of the vocational training requirement

Marketing Text: The project aims at improving energy efficiency in buildings alleviating the lack of knowledge of entrepreneurs and managers of the building industry. Specific objective will be to set up new methodologies and build up training modules in European standards concerning energy efficiency in buildings. This will be achieved by creating in partner countries, generally in Europe, an accessible training approach enriched by an e-Learning platform, visual elements simulations and interesting practices in building industry which final results will be especially in terms of: Reduction of Emission, Improved Comfort, Improved Indoor Air Quality, Quality Construction and indirectly for the owners Strong Position for High Resale Value, Easy Access to Preferred Mortgage Financing

Description: The Training Pilot Test will be performed in order to detect possible lacks or inconsistencies of the proposed training modules, contents and support material.
It will be executed in each of the participating regions and this task will imply:
- selection of participants-at least 75 participants chosen among entrepreneurs and managers and planners of the building industry, ;
- selection of tasks, roles and responsibilities of agents involved;
- organization of training;
- execution of training;
In executing the test,the participants will be given a username and password,in addition they will recieve on and off-line support from the project partners:during the test days in fact each partner will devote one resource for one hour to give on-line support.Moreover,the participants will be able to send their inquiries to an e-mail address created on purpose.
The participants will test the e-learning platform,which will be composed of two areas:the first will contain all the training material while the second will consists of proper training tools to test following the procedure defined in the methodology.

Target group: Entrepreneurs and managers of european building companies.

Result: Pilot test

Area of application: To test the e-learning platform

Product 'Regional Reports'

Title:	Regional Reports
Product Type:	procedure for the analysis and prognosis of the vocational training requirement
Marketing Text:	The project aims at improving energy efficiency in buildings alleviating the lack of knowledge of entrepreneurs and managers of the building industry. Specific objective will be to set up new methodologies and build up training modules in European standards concerning energy efficiency in buildings. This will be achieved by creating in partner countries, generally in Europe, an accessible training approach enriched by an e-Learning platform, visual elements simulations and interesting practices in building industry which final results will be especially in terms of: Reduction of Emission, Improved Comfort, Improved Indoor Air Quality, Quality Construction and indirectly for the owners Strong Position for High Resale Value, Easy Access to Preferred Mortgage Financing
Description:	the regional reports will be produced by each partner for its region in the light of the collected results. Moving from those results it will be possible to produce a document on the current situation of the entrepreneurs and managers of the building sector, their lacks, needs and opportunities. The envisaged survey will be as much as close in keeping with the current situation as possible, in order to design a training which can concretely fulfil the lack of the concerned sector.
Target group:	Stakeholders, SME's, public authorities and bodies, building companies, professionals, providers of energy efficiency tools and solutions, entrepreneurs and managers of building
Result:	Regional Reports
Area of application:	To design a training which can concretely fulfil the lack of the concerned sector.

Product 'e-learning multimedial platform now open!'

Title: e-learning multimedial platform now open!

Product Type: open and distance learning

Marketing Text: training modules on Energy efficiency in buildings have been developed and made available on an interactive e-learning platform. The system is enriched by a simulation tool allowing to simulate different energy measures and see the effect on a building that can be viewed from all angles.
EnEf traning system is targeted to managers and owners of small companies active in the building industry having no more than 30 employees, that are directly involved in the validation, testing and improvement of the training.

Description: Enef project – Energy Efficiency in the Building Sector – is now at the core of the scheduled activities: training modules on Energy efficiency in buildings have been developed and made available on an interactive e-learning platform. The system is enriched by a simulation tool allowing to simulate different energy measures and see the effect on a building that can be viewd from all angles.

EnEf traning system is targeted to managers and owners of small companies active in the building industry having no more than 30 employees, that are directly involved in the validation, testing and improvement of the training. If you are a representative of a SMEs of the building sector, please do the training available here http://www.enef-project.eu/index.php/en/the-learning-platform and then fill in the evaluation questionnaire here https://www.surveymonkey.com/s/EnEf_ITA
ENefe is a transnational project involving 7 European countries and all project products are available in all partners language. For the questionnaires in other langauges click on the link below:

ENGLISH: https://www.surveymonkey.com/s/EnEf_ENG

"Innovation and Quality: How do they fit together?"

Date	23.10.2012
Description	The conference is addressing Learning Innovations and Quality and in particular Lifelong Learning (LLL), Technology-Enhanced Learning (TEL), quality standards and certification, human resources development, competences and skills, as well as learning, innovation and quality management systems.
Target audience	All the expert in LLL, quality, building, constructions training center
Public	Event is open to the public
Contact Information	Eurocrea merchant, will be represented by its general Manager Mr. Gianluca Coppola who will be a speaker presenting the project ENEF which has been selected as a best practice
Time and place	The conference will take place on the 23rd of October, 2012 in Brussels, Belgium, at the Representation of the State of North Rhine Westphalia to the European Union

Renovate Europe Day - 11 October 2012 Stimulating jobs and growth in Europe

Date	11.10.2012
Description	Renovating the existing EU building stock is a real economic opportunity for Europe. It is a revenue-generating activity which contributes to urban renewal, strengthens social cohesion, boosts economic growth by creating local non exportable jobs (up to 19 jobs created for every €1 million invested), and leads to high public revenues (up to €5 additional budget revenue for every €1 of public funds invested). Renovate Europe Day 2012 will explore these wide-ranging benefits that investing in the energy efficient renovation of the building stock can offer, drawing from practical experiences at the local, regional and national level, and emphasing the links with the EU Cohesion Policy and Growth Agenda.
Target audience	
Public	Event is open to the public
Contact Information	Eurocrea merchant, will be represented by its general Manager Mr. Gianluca Coppola who will be attending the conference presenting and disseminating the project ENEF
Time and place	Thon EU Hotel 23rd October 2012 from 9am

Events

Final conference project ENEF

Date	26.09.2012
Description	Presentation of the project Methodology for conducting the pilot test Results of the Pilot test, feedbacks from SMEs, suggestions for improvements Presentation of EnEf simulation tool presentation of ENEF training platform presentation of the trainign modules
Target audience	Entrepreneurs, trainees, teachers, chamber of commerce, IT experts
