Les Meilleures pratiques et d`évaluation et classification

2010-1-SK1-LEO05-01563

http://www.adam-europe.eu/adam/project/view.htm?prj=8336

Information sur le projet

Titre: Les Meilleures pratiques et d`évaluation et classification

Code Projet: 2010-1-SK1-LEO05-01563

Année: 2010

Type de Projet: Projets de transfert d'innovation

Statut: Accordé

Pays: SK-Slovaquie

Accroche marketing: Les objectifs des projets sont:

1. Comparer des modèles medicaux et sociaux d'évaluation et determiner les domaines à améliorer
2. Introduire et intégrer un nouveau modèle biopsychosocial d'évaluation Classification internationale de fonctionnement, invalidité/handicap et santé (CIF)
3. Transférer la formation des clients dans L'Adaptation au travail, y compris les processus d'évaluation et le Profil de qualification du travailleur transportable cas de mobilité
4. Conseiller et former selon le VR modèle de prestation des services qui incorpore la nouvelle évaluation et adopte les meilleures pratiques de "case management" (gestion des cas)/ approche individuelle
5. Tester le modèle et adopter les meilleures pratiques

Résumé: Individuals with disabilities / disadvantages were not receiving adequate assessments, training and preparation to make them knowledgeable enough about their competencies and skills to find and keep a job. Even when they were able to obtain employment, they had difficulty maintaining work due to a lack of or misidentification of their aptitudes and skills for job matching. Repeating the job search process negatively have impacted their self-esteem, confidence and motivation.

Employers who recruited an individual with an impairment spent personnel and financial resources as an investment into the person's career and the company's productivity. They appreciated a much larger retention rate than what they were getting. They needed comfort and confidence that their contribution was not in vain and that the employee will last.

Providers of SE services need better methods and skills for completion of an initial needs assessment consistently and effectively in order to help the client develop and implement a sound plan of action. Similarly, they need case management training to provide quality support to the individual.

The result of these gaps in assessment and training at the client, employer and provider level was a large volume of individuals not properly and securely engaged with the workforce. The impact on a country's social systems and economy could be devastating. This project was designed to tackle these issues at all 3 levels. It aimed to introduce methodology and training that would assist with job matching processes and long term retention.

Description: This project brought together partners from 3 countries, some who have worked together before in a complementary fashion, to achieve outcomes. Each partner had various levels of expertise in project and financial management, assessment, service design and delivery, disability management, VR, SE, curriculum development, professional practice, quality assurance, research and reporting.
Outputs were: assessment tools and protocols, models, Adjustment to Work course, VR Consultant / Job Retention Case Management curriculum, Curriculum manual in International Classification in Functioning, Disability and Health(ICF), Final conference
Intangible outcomes: increased client /employer awareness / satisfaction, long term job retention, more individuals in work provider skills decreased drain
