*Dyslexic Knowledge Transfer in VET  
System*

Lifelong  
Learning  
Programme

## Purpose and need of the project

In the Czech Republic people (trainers, HR, etc) who should recognize and support those with disabilities are not sufficiently trained in the identification of dyslexia, how to work with them and how to support them in learning and progression into further study or employment.

Our aim is to clarify the problem of dyslexia to wider professional community among trainers and employers so they could make reasonable adjustments for the individuals with dyslexia.

For example, the UK has had many years of experience of implementation of disability legislation. The legislation ensures that all persons with dyslexia have a right to equal access to employment opportunities.

People with dyslexia need special support and help. Employment, and development of those skills that lead to employment, instructions and accessing information, as well as taking examinations are too difficult for the dyslexic individual.

## Project Aims

The purpose of the project is to raise the level of dyslexia awareness among trainers, teachers, tutors in VET, managers, employers, Human Resources personnel.

The main aim of the project is to raise the level of dyslexia awareness among those concerned with the identification and support of the dyslexic individual, in employment or following education that will lead to employment.

International partnership will contribute to the implementation of a system transferred through the transfer of innovation from other countries where the education system and some form of support mechanisms are in place for many years and it is legislatively anchored.

The purpose of this project is to implement in the Czech Republic, as well as in Bulgaria and Poland, a system already developed in UK.

## The project outcomes

### Transfer and adaptation of 9 modules:

1. Understanding dyslexia
  2. Identification of the strengths and weaknesses of dyslexic Individual
  1. Causes and consequences of dyslexia
  2. Using IT technology
  3. Personal preference in learning and work
  4. Preparing materials for the dyslexic learner
  5. Supporting the dyslexic learner
  6. Dissemination and good practice
  7. Disability legislation and dyslexia
- Transfer of the training modules into e-books (in Czech, Bulgarian, Polish and English)
  - Pilot testing in all participating country, modules adaption according to the comments and suggestions from the pilot study
  - Development of the project website as a communication platform between experts, project partners, pilot participant - adults with dyslexia. The main web pages of the project platform will be available in Czech, English, Bulgarian and Polish. The e-books will also be available in those languages on the project website.
