PIRATE - ECVET Construire en terre en Europe - Fournir des Instructions et des Ressources pour l'évaluation et la formation dans la construction en terre

528117-LLP-1-2012-1-FR-LEONARDO-LMP

http://www.adam-europe.eu/adam/project/view.htm?prj=9973

Information sur le projet

Titre: PIRATE - ECVET Construire en terre en Europe - Fournir des Instructions et des Ressources pour l'évaluation et la formation dans la construction en terre

Code Projet: 528117-LLP-1-2012-1-FR-LEONARDO-LMP

Année: 2012

Type de Projet: Développement d'innovation

Statut: En cours

Pays: EU-Projets centralisés

Accroche marketing: Le TERRE - matériau de construction créatif et universel dans l'architecture et la décoration durables.
ECVET- un outil pour créer les ressources utiles à la formation professionnelle dans l'éco-construction et la rénovation.
PIRATE - un projet pour développer des unités d'acquis d'apprentissage sur les techniques de construction en terre, vecteurs de compétence.
Nos unités ECVET vont
• offrir aux professionnels qualification modulaire, mobilité, perfectionnement et facilitant la recherche d'emploi ;
• guider les formateurs dans le développement de nouveaux contenus pédagogiques, de procédures d'évaluation, l'appréciation des acquis ;
• servir aux organismes certificateurs dans la révision et la création de référentiels, facilitant la comparaison entre pays.
La plupart des partenaires de PIRATE ont déjà contribué à des projets européens sur la construction en terre. Les groupes de travail européens créeront des liens, pour échanger les expériences et capitaliser les acquis.

Résumé: This project contributes to address the constantly rising social demand for improving the ecological and energy balance in the construction sector. Its aim is to favour an increase of the number of workers and supervisors qualified in natural and healthy building materials, more specifically earth building materials and techniques, both for new construction and rehabilitation of heritage buildings.

The objective is to establish favourable conditions for an increase of the training opportunities (Level 3 to 6) for the use of earth building materials and techniques, including flexible routes for lifelong learning (mobility, transfer, validation processes).

To achieve this, the project will act towards the standardisation of the certification of the learning outcomes in earth building, in a system recognised across Europe. This will be done following the recommendations of the European parliament and council (ECVET, ECTS, EQF), through creating a full range of learning outcomes in a comparative and transparent manner, and favouring the possibilities for international mobility and lifelong learning opportunities for learners and practitioners.

The project will allow enhancing European wide exchange and inter-professional dialogue on earth building skills, modern and innovative techniques among training providers. Consortium partners will also take the opportunity of the project to learn about and compare typical building technologies, norms and standards, and trades and crafts of different countries. That will also contribute to the re-appropriation of vernacular construction methods and materials. This can induce a recovery of autonomy, self capacity to develop competence, and also pleasure and creativity in the professional development.

Description: Le projet PIRATE fait suite aux projets Acquis•Terre (TOI 2007-2009) et LearnWithClay (Partenariat 2010-2012).

Après le développement d'un référentiel ECVET Construire en terre portant sur les enduits en terre, puis sa mise en pratique, une nouvelle étape va être franchie dans l'introduction du matériau terre dans la formation professionnelle.

Information sur le projet

En effet, PIRATE vise à élargir le référentiel ECVET Construire en terre aux techniques de construction en terre porteuses : maçonnerie de briques de terre crue (adobes ou BTC) et murs monolithiques.

Le travail sur les référentiels d'activités et de compétence se fera dans des groupes de travail transnationaux appelés MONO et BRICK (niveaux CEC 3 et 4) et SUPERV (niveaux CEC 5 et 6).

En parallèle, des groupes de travail nationaux oeuvreront pour la reconnaissance des unités ECVET Construire en terre dans les systèmes de certification.

Thèmes:
*** Formation tout au long de la vie
*** Validation, transparence, certification
*** Formation initiale
** Développement durable
** Enseignement supérieur
** Entreprise, TPE, PME
** Égalité des chances
** Formation continue
* Utilisation et diffusion de résultats
* Marché du travail
* Qualité
* Étude interculturelle
* Orientation professionnelle

Sectors:
*** Construction
** Enseignement

Types de Produit:
Description de nouveaux métiers
Méthodes d'évaluation
Film
Site Internet
Transparence et certification

Information sur le produit:
18 partenaires de 8 pays vont s'associer pour développer des référentiels de compétence
- sur le modèle des unités déjà utilisées pour les enduits en terre (ECVET Construire en terre)
- avec critères d'évaluation
- pour les murs porteurs en terre crue (murs monolithiques et murs d'éléments maçonnés)
- en distinguant pisé, bauge, briques de terre crue (adobes ou BTC) pour les niveaux européens 3&4 (CEC), soit 4&5 français (CNC)
- sans distinguer les techniques pour les niveaux 5&6 européens (CEC)

Produit 'Matrix of ECVET Units of learning outcomes in earth building'

Titre:	Matrix of ECVET Units of learning outcomes in earth building
Type de Produit:	Méthodes d'évaluation
Texte marketing:	
Description:	The matrix of learning outcomes in earth building techniques provides lists of knowledge, skills and competence as well as criteria, indicators, recommendations for assessment. It is translated into all partnership's languages and published on the public website as a printable electronic document
Cible:	Trainers, training providers, assessors, learners, certifying bodies
Résultat:	
Domaine d'application:	Competent bodies for certification will have access to: - models for learning agreements for mobility exchanges in the earthbuilding field; - examples of procedure for application of ECVET; - example of evaluation of informal and non formal learning outcomes ; - example of transfer and validation (transnational and national) ; - quality recommendations for application of ECVET; - proposal for quality recommendations; - proposal for combination of ECTS and ECVET.

Produit 'Newsletters'

Titre:	Newsletters
Type de Produit:	Autres
Texte marketing:	What is these PIRATE's quest about? They are looking for earth! The purpose of all their activities is to get earth recognized as a modern, healthy, creative and sustainable building material. And as a such to be taught to any professional of the construction sector, from the mason to the engineer. The projects newsletters tell about the partners efforts to introduce earth into national training systems.
Description:	An electronic newsletter will be released twice a year during the projects life. It contains updates about main events and outcomes of the project. It will include focus from partners about specific aspect of the project. The newsletter will be sent to all public who submitted for it on the website.
Cible:	trainers and teachers, learners, assessors, training providers
Résultat:	Newletter 1 (february 2013) and presents the consortium and gives insight in partner activities Newsletter 2 (september 2013)
Domaine d'application:	The newsletters are used on all the levels of dissemination. They are available on the public project website and and sent to - the staff and members of the project partners - all the persons and organizations the partners are in contact with, both in the european process of describing learning outcomes and in the national process of certifying ECVET units.

Produit 'Project flyer'

Titre:	Project flyer
Type de Produit:	Autres
Texte marketing:	Look at the map and imagine the network these PIRATEs are about to weave across Europe! The builders, trainers, architects and engineers involved in this ECVET project are determined to share their treasure with you : earth building skills and techniques, as ancient as mankind but as new as low energy housing, disaster prevention and affordable housing.
Description:	1000 flyers with basic information on the project aims and partners and including contact information, will be printed and distributed to partners during the kick-off meeting. It serves mainly to redirect towards the website. These flyers contain very few text and are therefore only printed in English. Partners may edit pdf versions in their language.
Cible:	- partners staff and members, - key actors for dissemination and certification, - builders involved in the development process of the new units of learning outcomes
Résultat:	The English flyer has been printed in november 2012 and distributed during the kick-off meeting among the consortium partners for further dissemination. Unfortunately there is a mistake in the adress of the project website on the printed flyer (http//: instead of http://) Since the flyer has been translated into several other languages : FR, CZ, PT

Jorchel_et_al_Provide_instructions.pdf

http://www.adam-europe.eu/prj/9973/prd/14/1/Jorchel_et_al_Provide_instructions.pdf
Earth is a unique building material which is easily accessible and available. Building products and processes using earth need little embodied energy during the whole life circle. The use of earthen building material reduces the carbon dioxide emissions and contributes to a healthy indoor climate. Moreover earth architecture has an aesthetic value. Historic and modern buildings take advantage of these technical, aesthetic, environmental and social benefits. There is a still small but growing market in earth construction. The advances obtained with PIRATE project, trying to contribute for the growth of this specific market, will be presented in this paper. The PIRATE project aims to disseminate the benefits of modern earth construction by creating lifelong learning opportunities, putting the emphasis on competence standards in this sector. Eighteen organisations from eight European countries, all active in the earth construction sector as professional associations, education and training providers or small companies, have come together to develop units of learning outcomes and get them recognised within national certified courses. The new standards comply with the European Qualification Framework (EQF) and the European Credit System for Vocational Education and Training (ECVET)

Paccoud_Didier_Earth_goes_Europe.pdf

http://www.adam-europe.eu/prj/9973/prd/14/1/Paccoud_Didier_Earth_goes_Europe.pdf
Earth material has numerous advantages when it comes to reducing environmental impacts in the building sector, but its use remains limited as few professionnals are trained : very few formal trainings exist at european level. European earth-building training projects were undertaken during the last years to open the way for the official recognition of earth-building's skills and knowledge. This is an essential part of the effort to widespread the use of earth in the building sector. This paper intends to stress the interests of assessment to get earth construction recognized and introduced in current construction trainings at all levels, and to recognize learning outcomes to deliver certificates. Firstly, the concepts of assessment criteria and units of learning outcomes, part of the ECVET framework (European Credit system for Vocational and Educational Training) will be described through example of previous experiences in european earth-building training. In a second part, the development of this experience acquired with projects dealing with clay plasters will be presented : the PIRATE (Provide Instructions and Recommendations for the Assessment and Training in Earth-building) project aims to build with 18 european partners the foundations of european earth masonry and supervision trainings by proposing assessment criteria and defining units of learning outcomes able to integrate existing curricula. Finally, the current progress of this project will open to questions about the opportunities and issues encountered so far.

BRICK Test

Date	25.02.2015
Description	Our second test exam aims at re-evaluating the matrix design in a different environment and including mobility issues. It is planned and organised in the formal context of an experienced VET centre, welcoming 2 foreign trainees. We use the level 3 & 4 drafts to assess learning outcomes for unit Bb. With BRICK Test, we end the validation phase of the project.

IAHS 2014 Conference

Date	16.12.2014
Description	The main purpose of the congress was to debate topics related to new environmentally friendly construction materials and technologies, energy efficiency in buildings, waste management, and other topics linked to sustainability in construction. Our Presentation in the session TS03 - Earthen Housing Construction: Was about the PIRATE Project, its aims, network (partners) and content as well as presentation of midterm results and discussion with audience on how to increase the impact of earth building in the construction sector in the EU.

Healthy Houses 2014 conference

Date	10.10.2014
Description	The conference was visited by a group of European partners of the earth building and training network. Partners of PIrate Project and of the project New Members of ECVET Earth building participated. There was a joint presentation by the two projects about ECVET Earth building. First Grégoire Paccoud - as P2 in Pirate project presented a presentation about assessment and certification. Then Uta Herz - as a participant of the “New Members for ECVET Earth building” presented the European Earth Building Network. The presentation aimed to give a background understanding of the history and future of European networking to improve VET in Earth Building and a background understanding of how the PIRATE project started. Then the different partners sat in the podium and each of them told how and why they joined the European Earth building network. This was a unique experience for the audience listening to earth building partners from Poland, France, Germany, Cyprus, Spain, UK, Slovakia and of course Czeck Republic.

SUPERV 2

Date 17.02.2014

Description At the end of SUPERV1, we have decided that the units described in the CSPM1 document were too detailed (too many units) and we have decided to create a specific unit frame by grouping some of CSPM units and by developing some others (for example for “Study”). This new frame is composed of eight units.

P6 has presented a first draft of learning outcomes for these 8 units (French version from 30 of May 2013 and 27 of January 2014, partial English translation from 10 of February 2014. P3 has amended these documents (drafts of February 13th 2014). The learning outcomes listed in the 8 units are derived from

a) the competence standards of the French “national teaching program”(PPN) for civil engineering and sustainable construction;
b) the eight CSPM units
c) the learning outcomes listed in the ROME (Répertoire Opérationel des Métiers et des Emplois = professions and jobs database of the French Job centre).
d) some learning outcomes described in certain qualification of the RNCP database (www.rncp.cncp.gouv.fr).

• The main objective of SUPERV2 was to add learning outcomes specific to earth construction into these units.

• The second objective of Superv 2 was to start the discussion/creation of assessment criteria for levels 5 and 6.

• Further objectives were

- the presentation of the results of the survey about earth contents in teaching programmes of higher education
- the work on the glossary (WP2) of building professions
- a look at the homework planned after superv 1
- the domains for trades, occupation, professions in building sector at levels 5, 6 and 7 in the various countries present in superv group (UK, Germany, France and Portugal),
- the existing national documents on the description of skills at levels 5, 6 and 7.

BRICK 1

Date	13.03.2013
Description	The core of the first meeting of workgroup BRICK is to share the national meetings results about levels and units and to find how to shape the units according to the different national and professional frames and experiences. To achieve a shared result, small transnational groups are formed. It is expected to have a common list of units, as well as a common list of skills and knowledge at the end of the meeting..

MONO 1

Date	02.02.2013
Description	The first meeting of the MONO group was to start the technical process of capturing, writing and sorting materials from the national group meetings into Skills, Knowledge and Competence. This was discussed in the light of the need to bring two technologies, rammed earth and cob, into a single process and the best way to achieve that. It is expected to have a common, agreed list of skills (tasks) and knowledge, divided according to 4 to 6 main categories of activities (units) by the end of the meeting.

Kick-off meeting

Date	28.11.2012
Description	DAY 1: Presentation of the partners. Summary about previous project results and ECVET. Presentation of the structure of the project: - Aims, deliverables, calendar, exploitation, - Dissemination, - Quality management, - Financial aspects. Workshops : - Our tools for collaboration and communication, - Partners budget and budget tables for financial reports, - National certification strategies and committees and key actors directories, - List of earth building activities (terminology, levels) in different crafts and trades. DAY 2: Work packages and project methodology, tasks of the partners, milestone interim report. Introduction to the DACUM method and ECVET units matrix, constitution of the 3 project workgroups MONO, BRICK, SUPERV, plan the WG meetings. Evaluation, to do list, dates, synthesis of the workshops.
