Projektinformation

Titel: Herbal.Mednet - Verbesserung der Berufsbildung von Innovative Landwirtschaft Trainer / Berater im Bereich der Kräuter-, Heil-und Aromapflanzen

Projektnummer: 2012-1-ES1-LEO05-50453

Jahr: 2012

Projekttyp: Innovationstransfer

Status: abgeschlossen

Land: ES-Spanien

Marketing Text: Verbesserung der Berufsbildung von Innovative Landwirtschaft Trainer / Berater im Bereich der Kräuter-, Heil-und Aromapflanzen

Zusammenfassung: Organic farming of herbs and medicinal and aromatic plants is of major importance for rural economy due to their contribution to agricultural diversification and better use of land. Herbs have been used by local populations in traditional ways for many centuries. Their novelty is thus not related to their introduction to new areas but rather to the ways in which old and new uses are being re-addressed to meet today's needs.

Existing e-learning content in the topics of organic farming of herbs and aromatic and medicinal plants needs to be appropriately adapted, transferred and validated in relation to the needs of the farmers, so that this area of farming is further understood and adopted. To this end, there is a clear need for targeting agricultural advisors and extension officers, in order to further educate them and prepare them to effectively guide, train, and support farmers.

To address the above need, Herbal.Mednet aims to achieve the following objectives:

- a) Identifying and analyzing targeted needs and competences in order to prepare a set of highly-qualified agricultural advisors and extension officers, who can serve as trainers in adopting and applying organic herbal cultivations and producers / processors of extracts from medicinal and aromatic plants in Mediterranean countries.
- b) Developing a training program that will particularly enhance and address the targeted competences for the advisors of organic herbs farmers and processors as well as specific case studies that apply for the specificities of the participating Mediterranean countries, Spain, Italy and Greece.
- c) Developing Vocational Education and Training Scenarios that will particularly enhance and address the targeted competences for the advisors of organic herbs farmers, producers and processors
- d) Adapting and enhancing existing training methods and content from previous innovative initiatives such as the Organic.Edunet eContentplus one (www.organic-edunet.eu).
- e) Making available technical solutions and platforms that may support the provision of this training program from previous innovative initiatives.
- f) To carry out a set of focused pilot trials that will validate the proposed training scenarios and the transferred e-learning content.
- g) To promote and reinforce the cooperation of stakeholders in this particular content area, which will –at the same time- support the sustainability of project results.

Beschreibung: Herbal, medicinal and aromatic plants (MAP) have been an important resource for human healthcare from prehistoric times to the present day. According to the World Health Organization, the majority of the world's human population, especially in developing countries, depends on traditional medicine based on organic herbs. Between 50,000 and 70,000 plant species are known to be used in traditional and modern medicinal systems throughout the world.

Organic herbs are of major importance for rural economy due to their contribution to agricultural diversification and better use of land, their economic potential and the opportunities they provide for medicines' use diversification. They have been used by local populations in traditional ways for many centuries. Their novelty is thus not related to their introduction to new areas but rather to the ways in which old and new uses are being re-addressed to meet today's needs.

Produktinformation: The workplan of Herbal.Mednet project has been structured into six Work-Packages (WPs). These facilitate the proper organisation and implementation of the project. The WPs are the following:

- WP1: Users Needs Analysis. This work package will study the training needs of the participating user groups through consultation meetings and an online survey. This WP will carry out a continuous needs analysis and existing Vocational Education and training opportunities for the whole lifetime of the project, as well as the identification of existing job opportunities and the required competences of the user groups in the targeted participating countries that can support the identification of the requirements for designing and developing a vocational training curriculum based on needed and required competences and skills on targeted job profiles.
- WP2: Training Curriculum Design, Development and Localization. Work package 2, will carry out the necessary procedures to design the proposed training curriculum for the agricultural advisors in topics of organic farming of herbs, medicinal and aromatic plants. Additional, WP2 will deal with the selection and adaptation of existing training content to support training in the participating countries. Related and relevant training resources will be described and published online so that all users may access them anytime, anywhere, through Internet.
- WP3: Herbal.Mednet courses platform development and population. This work package aims to design, develop and deploy a specific Herbal.Mednet platform that will facilitate search, browsing access and retrieval of learning objects in fields of organic farming of herbs, medicinal and aromatic plants. Additionally WP3 will provide the specialization and deployment of the online platform that will offer the Herbal.Mednet users with a number of online courses, which will allow them to gain access to the developed training content, through web-based interfaces.
- WP4: Delivery, Training, Piloting and Validation. The aim of this WP is to execute the Herbal.Mednet pilot training session and validation training seminars within each partner country, and to collect evaluation feedback that will improve and/or validate the project's training approach.
- WP5: Dissemination & Valorisation. This work package aims at making the results of the project known to the public. This will be mainly achieved though the project website. So, partners and user organizations involved in the project will disseminate the project result to targeted users in the involved countries.
- WP6: Management and Administration. The aim of this work package is to ensure the quality levels of the project's results through the continuous monitoring of the project activities and their proper execution, the coordination of the work plan, and the optimum coordination of the partners.

Produkte

- 1 Herbal Mednet Website
- 2 Training Handbooks
- 3 Vocational Training Needs on organic Medical & Aromatic Plants topics

Produkt 'Herbal Mednet Website'

Titel: Herbal Mednet Website

Produkttyp: Homepage

Marketing Text: Herbal Mednet's website provides information, news and project documents, in 5 languages. In addition, it 's possible to watch and download seasonal newsletters.

Beschreibung: A project web-site has been developed, for the dissemination and valorization of the project activities including local dissemination activities such as national conferences and/or workshops as well as international dissemination activities such as conferences, journals and/or liaisons with related projects and initiatives from EC programmes. Through the website constant online presentation and dissemination of the project progress and results has been made available.

Another project project valorisation activity linked to the website is the creating a database of related contacts, which served as the medium for communicating with actors interested in the project news and achievements. People has been included in the contact database only if he/she provided his/her consent for it. This contact database has been created in three ways, which respect both the personal data and privacy of registered people. The project website has been used as a medium of collecting contact information from people who express their interest in the project. The members in the contact lists of each partner have received an invitation e-mail to describe the project and to ask them to register for receiving more information about it. The contact database includes addresses of major mailing lists (such as IFOAM ABM mailing list) or other projects and initiatives active in a related area, and who publish newsletters open to external contributions such as the ones disseminated by the project.

Zielgruppe: Advisors, trainers, agricultural farmers

Resultat: The Herbalmednet project webpage is available in internet. Moreover, direct dissemination and valorization of the project activities or indirect through social networks (Facebook).

Anwendungsbereich: The development of the valorisation plan was made to fulfill the project objectives. The initial task related with the valorisation activities of the project, was to produce a detailed plan to present the valorisation strategy, the dissemination/publicity activities, the exploitation/sustainability activities, as well as the corresponding tasks, timetables and expected results.
Organizing all required activities that facilitate the appropriate dissemination of the project results at various levels (that is, national, European and sectoral ones), helps to achieve the project aims. In this sense dissemination of innovative methodological results to the academic communities of vocational education & training and lifelong learning, through their presentation at international and national scientific journals and conferences contributes to the objectives of the project.

Produkt 'Vocational Training Needs on organic Medical & Aromatic Plants topics'

Titel: Vocational Training Needs on organic Medical & Aromatic Plants topics

Produkttyp: andere

Marketing Text: Perceived training needs of the user organizations regarding topics of organic Medicinal and Aromatic Plants (+ herbs)

Beschreibung: A literature and web resources' review on the existing training content in area of organic Medicinal and Aromatic Plants (+ herbs) has been done and developed with information coming from partners and elsewhere, to determine what already existing resources can be adapted for use in the Herbal.Mednet uses.
The user partners has adapted the provided material in their own languages, to organize one NCM in their country.
Also three open events were organised in GR, IT, ES between experts and user representatives, where other interested stakeholders has been invited (such as educational stakeholders, representatives of professional associations, ministries officers, agricultural and enterprise chambers, policy making organizations, and governmental agencies). During the events, project partners initiated an open discussion, trying to elicitate from participating experts which are the perceived training needs of the user organization regarding topics of organic MAPs. These collected requirements are represented in terms of necessary competences and desired forms of providing this training. To facilitate recording and collecting feedback, appropriate questionnaires has been distributed.

Zielgruppe: agricultural advisors, trainers and researchers and advanced organic operators

Resultat: This document is available as print version in the Herbalmednet project webpage

Anwendungsbereich: This result help to select documents for the National Seminars. In this way to investigate already existing Vocational Education and training opportunities in the participating countries helps to the project aims
