MoMoVET – a Model of European-wide learning Mobility in VET

European Credit system for Vocational Education and Training (ECVET) is a powerful tool of the strategic framework for European cooperation in education and training (ET 2020) for increasing cross-border cooperation in education and training. It should lead to portable qualifications and transferable learning outcomes, thereby making **learning mobility** and **lifelong learning** a reality for young and adult learners. EU Member States have started implementing ECVET, as CEDEFOP's 2010, 2011, 2012 and 2013 monitoring reports show (<http://www.cedefop.europa.eu/en/tags/ecvet>). However, there has been a widespread feeling among ECVET working groups and officials in charge of ECVET in Member States that **common guidelines are needed** to support the strategy formulation and peer learning.

ECVET is, therefore, **essential** for the development of VET and qualifications systems, but, at the same time, its implementation can be a complex and **challenging process**. There is therefore a growing need for **guidance** on how to develop ECVET and cultivate a sense of shared ownership during the implementation process. Towards this need, the **ECVET STEP project** (<http://ecvet-step.eu>) is creating **MoMoVET** – a Model of European-wide learning mobility in VET, which can be used by any organisation interested in a step-wise, effective and efficient approach for the adoption of ECVET.

MoMoVET aims to be an elaborate, harmonized model of current processes and workflows related to VET and VET-related mobility, covering the perspectives of different stakeholders across EU countries and different contexts including formal, non-formal and informal VET activities.

The emphasis for the first version of the model has been in documenting the current approaches and best practices according to the principles of ECVET and the Leonardo da Vinci mobility actions and uses a structured approach for the presentation of the model, based on documentation of the associated workflows using the Business Process Model and Notation (BPMN) approach. A future version of the model will take into account European instruments like EQF and European standardization project outputs like EuroLMAI, InLOC and e-CF will be considered in order to align the model to the already existing European policies.

The next diagrams present the **BPMN models** of the 1st version of MoMoVET. More information are available in the **online toolkit** of the ECVET STEP project: <http://ecvet-step.eu/toolkit>
