The adapted and uploaded contents of the TES Modules

A portal for the T&T (Telework & Training) project had been developed at the web address: <http://www.ctanm.pub.ro/T&T/index.php>.

Adapted and uploaded contents of the TES Modules about Telework topics and e-Learning topics were divided for the three blended training course containing modules. The Syllabus of the training courses is represented in the next figure:

	Students	Teachers	Decision makers and managers
The T & T project Moodle Platform"	★	★	★
Introduction to Telework	★	★	★
Telework Paradigm		★	★
From Paradigm to Telework Models		★	★

New modules have to be written in order to cope with the technological advance during the gap of 5 years between the conclusion of TES project (2003) and the launch of the T&T project (2008). These modules will be: "Wiki, E-libraries and Virtual Museums", "Web 2.0" and "E-learning platforms".

The training courses will be designed specifically for three categories of learners (target groups): university students, teachers from pre university schools and from pre university VET high schools,

who are also trainers for adult persons.

Preparing the Transnational Meeting and Public Conference in Spain

Till 2010, February 25 to 27 the members of the Consortium will meet in Ribadeo, Spain.

(<http://centros.edu.xunta.es/cifpportadaauga/castellano>)

This meeting is dedicated for the discussion of the future design of the Learning Object SCORM of the adapted and localized Modules about Telework and e-Learning topics.

In order to transfer the results of TES Project to Telework Training of Education and Training Operators, the T&T project finished the adaptation of the Training Modules to the e-learning context, the linguistic localization and the structural adaptation of the main TES products with the following objectives:

- to analyze and to adapt TES Model and System and TES Training Modules as chapters of the book “Introduction to telework” and also as training module of a new course, designed for a Moodle platform;
- to implement the linguistic localizations of the T&T Portal and updated training modules;
- to plan and implement three updating seminars and then, to run three training courses.

Another topic will be the book realization both in hardcopy and e-Book format, in Romanian and in all the other partnership languages different from Italian and English.

The design of the Learning Object SCORM of the adapted and localized Modules about Telework topics and e-Learning topics

The design of the Learning Object SCORM, proposed by the each partner, has to be analyzed for finding a commune tasks for all future trainees. Initially, the contents of the **courses have special assignments for:**

- the evaluation of the course design,
- finding new improvements and the weakness parts for the new designed course.

The individual activities have to require that the learner works alone and produces a document in which the results of her/his work are presented. The debates on the forum focused on issue concerning the modules will be an evaluation method interesting and meaningful. The collaborative activities will demand to the learners to made teams and to perform a complex task. Finally, they will produce a document in which each contribution can be highlighted
