Project Information

Title: DEWEBAS
 Project Number: 2004-DK/04/B/F/PP-145.408
 Year: 2004
 Project Type: Pilot Project, project with multiplying effect (2000-2006)
 Status: completed
 Country: DK-Denmark
 Marketing Text: The DEWEBAS- competence tool for the European wood- and furniture industry, can contribute to improve transparency, quality and transfer of credit in the vocational educational systems within the European furniture Industry. The tool can also strengthen the lifelong learning process for all employees within the wood - and the furniture industry.

Summary: The project will contribute to improving transparency, quality and transfer of credit in the European furniture industry's existing vocational education systems and will develop visible tools for recognition of formal, informal and personal competences. Furthermore, the project will try to promote a model for harmonisation of the education systems and mutual recognition across open borders. The tools from the project can also form part of the lifelong learning process for the employees, and it is also a way to show the worth of the smaller educational fields, which are about to close because of lacking formal and informal competences.

Description: DEWEBAS is based on a uniform registration in a database of the necessary VET part competences, which are contained in all wood and furniture education in the pilot project's participating countries. The pilot project contains education covering the spectrum from wood processing in a sawmill to the final apprenticeships within furniture production (The VET-educations for: Upholsterer, Woodmachinist; Cabinetmaker, Joiner). It is possible to make a direct comparison between skills and competences, obtained in each single country's systems of vocational or supplementary training. DEWEBAS has made a web-based tool, which can be used by employers, organisations, ministries, schools and single persons, who wish to take work in other EU-countries or wish to do practice in another country. The tool will register different kinds of skills: both necessary basic skills for a certain education and informal competences such as technical competences, where you cannot document any formal examination, and personal competences, which are achieved. All those three kinds of competences will be made visible in a graphic layout, which can be compared with the demands of another country to the same competence area. A company can also put a desired competence profile on the website, where others may compare their own competences to the demands. The graphic profile can for instance also be used for planning supplementary training in another country.

A table of credit can be built in, which makes it possible to define credit across education/courses and across borders.

The product DEWEBAS is a common European tool, and in order to accelerate the integration process of new candidate countries we involve two of them. All parties are essential actors within the wood and furniture industry in Europe.

Themes: *** Lifelong learning
 *** Recognition, transparency, certification
 *** Continuous training
 ** Initial training
 * Utilization and distribution of results
 * Labor market
 * Enterprise, SME
 * Equal opportunities

Sectors: *** Education
 ** Manufacturing

Product Types: description of new occupation profiles
 evaluation methods

- 1 The DEWEBAS- competence tool for the European wood- and furniture industry

Product 'The DEWEBAS- competence tool for the European wood- and furniture industry'

Title: The DEWEBAS- competence tool for the European wood- and furniture industry

Product Type: website

Marketing Text: Can contribute to improve transparency, quality and transfer of credit in the vocational educational systems within the European furniture Industry. The tool can also strengthen the lifelong learning process for all employees within the wood - and the furniture industry.

Description: The project will contribute to improving transparency, quality and transfer of credit in the European furniture industry's existing vocational education systems and will develop visible tools for recognition of formal, informal and personal competences. Furthermore, the project will try to promote a model for harmonisation of the education systems and mutual recognition across open borders. The tools from the project can also form part of the lifelong learning process for the employees, and it is also a way to show the worth of the smaller educational fields, which are about to close because of lacking formal and informal competences.

Target group: The EU furniture industry (83 billion euro worth of turnover in 2001 of which 12% are extra-EU exports) employs about 1 million persons. The EU furniture industry has recently lost international competitiveness and market shares. Improvement of the design/innovation/training factor can improve competitiveness; strengthen the flexibility and the cooperation among companies in the furniture industry.
Anybody

Result: The project will contribute to improving transparency, quality and transfer of credit in the European furniture industry's existing vocational education systems and will develop visible tools for recognition of formal, informal and personal competences. Furthermore, the project will try to promote a model for harmonisation of the education systems and mutual recognition across open borders. The tools from the project can also form part of the lifelong learning process for the employees, and it is also a way to show the worth of the smaller educational fields, which are about to close because of lacking formal and informal competences.

Area of application: The pilot project contains education covering the spectrum from wood processing in a sawmill to the final apprenticeships within furniture production (The VET-educations for: Upholsterer, Woodmachinist; Cabinetmaker, Joiner). It is possible to make a direct comparison between skills and competences, obtained in each single country's systems of vocational or supplementary training. DEWEBAS is a web-based tool, which can be used by employers, organisations, ministries, schools and single persons, who wish to take work in other EU-countries or wish to do practice in another country. The tool will register different kinds of skills: both necessary basic skills for a certain education and informal competences such as technical competences, where you cannot document any formal examination, and personal competences, which are achieved. All those three kinds of competences will be made visible in a graphic layout, which can be compared with the demands of another country to the same competence area. A company can also put a desired competence profile on the website, where others may compare their own competences to the demands. The graphic profile can for instance also be used for planning supplementary training in another country.

A table of credit can be built in, which makes it possible to define credit across education/courses and across borders.
