**Subject:** What's in it for you? European Projects Update

### Projects Update from iSmithers

---

#### KTRM

**Rapid Manufacturing is seen as one of the most important emerging technologies that will drive the future manufacturing economy.** RM products and services are an important of the EU industry with clear potential for the future.

The KTRM project aims to put together to a comprehensive training program helping users to improve their methods and systems for Rapid Manufacturing, from design through development to the manufacture of products in polymers, aluminium, titanium and steel.

**If this is an area that it of interest to you then have your say to influence the project by [answering our survey](#).** Simply complete the PDF with your answers, save and e-mail back to [ksmith@ismithers.net](mailto:ksmith@ismithers.net).

#### REACH for Polymers

[REACH FOR POLYMERS](#) aims to increase and consolidate the knowledge base of the European polymer industry, in particular SMEs.

Information currently available on the website includes a State of the Art report, so why not [register](#) to find out more?

#### iPolyCond

The [iPolyCond](#) project is progressing well - pilot testing will be taking place in the first half of 2011, offering exclusive access to the resources before they become widely available. [Register](#) on the website for your chance to be involved, plus access to the following:

**iPOLYCOND**  
conductive polymers

- The iPolyCond Library of information;
- Results of the Industrial Survey;
- Datasheets, Case Studies and Presentations from the PolyCond project;

- ... and more.

Go to the [iPolyCond website](#) to register today! You can also [e-mail us](#) if pilot testing these resources would be of interest to you.

---

## Energywise

Work on the [Energywise Plastics](#) project is progressing with the development of a comprehensive and integrated training course specifically for the European plastics processing industry, covering all aspects of energy management. The pilot testing phase of the project will commence in early 2011. Again, **this phase offers exclusive access to the resources before they become widely available**, so why not [register](#) on the website for your chance to be involved or [contact us](#) to let us know of your interest.

## p-REACH

[Polymer REACH](#) is also moving forward as planned and will be entering the pilot testing phase in the first months of 2011. There's a Benchmarking Report and a State of the Art Report available to download from the website, so visit [www.polymer-reach.eu](http://www.polymer-reach.eu) today, where you can [sign up](#) for more information. You'll also be considered for the **early, exclusive access to the learning resources through the pilot testing**, so [sign up](#) today! You can also [contact us](#) to advise us of your interest in participating in the pilot test phase.

---

Kind regards
