

## Vocational Training Courses

The e-learning courses, designed in the framework of the project, are tailor made for the agriculture sector and are specifically customized to the characteristics of the job rotation idea; that is “farmers will employ trained unemployed during the time that they will receive training in Management”.

More specifically, the unemployed will be trained in “Production and standardization of agriculture products”; a course that during the Agrotate project will be customized to specific regional needs.

Respectively, farmers will be trained in “Management of Agriculture companies” a course that includes all necessary topics for a farmer for the organisation, operation and overall management of his businesses, effective marketing and distribution of products.

## Job Rotation model

The Job rotation e- service matches the needs of each farm with the qualifications of the unemployed and proposes the best matches between them. The farms, participating to Job Rotation Models, can easily submit their profile and their job rotation offers in order to find the most adequate unemployed to fulfil them.

## Agrotate: “Job Rotation e-service life long learning for the Agriculture Sector”

Life long learning and unemployment know no frontiers. Farmers, no matter which country they belong to, they have similar needs for upgrading their skills and limited free time to follow traditional training courses. On the other hand job seekers across Europe ask for training relevant to the market needs and a sustainable job position in order to overcome the uncertainty of the current economical crisis period.

Unemployment is a major concern in several European Union Member States at the moment. Governments need to help the unemployed find jobs by engaging employers more actively in this process.

Job rotation is a training model in which the unemployed are educated and trained continuously in order to replace employees in companies, during the time that they leave their jobs for more education and training.

The Agrotate system, integrating in a web application the job rotation model, aims at linking training and employment needs to each other. It is an online matching tool that connects unemployed qualifications with farm's needs, and an e-learning platform that offers through distance learning the aforementioned courses.

## The main Goals of the Agrotate project are:

- to promote the job rotation e-service by giving the ability to farmers to educate them selves or their employees lifelong, replacing them with suitable trained unemployed,
- to fight the long-term unemployment by training unemployed in real farms' production procedures and,
- to reduce the gap between the demanded and offered qualifications in the agriculture sector.

The unemployed can choose the kind of farms they are interested to work at, the preferable working schedule, their current qualifications and skills and then the system will propose them the most adequate job positions in farms that are published in the system by farms participating to job rotation models.
