Marketing Text: The WIDER Project will undertake activities to promote the benefits of Leonardo projects, and improve the visibility of potential opportunities through dissemination and exploitation of previous project results. The College has been involved in European Mobility projects funded through predecessor programmes to the current Lifelong Learning Programme for 10 years, as well as a wide range of other EU funded projects (ESF, ERDF, EQUAL).

Zusammenfassung: The WIDER Project will undertake activities to promote the benefits of Leonardo projects, and improve the visibility of potential opportunities through dissemination and exploitation of previous project results. The College has been involved in European Mobility projects funded through predecessor programmes to the current Lifelong Learning Programme for 10 years, as well as a wide range of other EU funded projects (ESF, ERDF, EQUAL). During this time, groups of vocational trainees have taken enormous benefit from the opportunity to gain work experience in other EU countries. Participation in Leonardo activities, however, has been limited to small groups from certain areas of the College. The College wants to greatly increase participation not just within the College, but across the region, through raising awareness of the benefits EU mobility can bring to the education and training experience and to the employability of participants in the European Labour Market. The project will firstly carry out a systematic assessment of the results of previous projects undertaken by the College, and, using the findings of this analysis, will undertake a two day event to promote the Leonardo Programme to staff, trainees and SME employers throughout the region, including the Convergence area of Cornwall. The objective of the project will be to significantly raise the profile of the Leonardo Programme in order to increase the number and diversity of applications made in the region from 2008 onwards. In addition, the project will develop publicity materials such as case studies, which will be available to use more widely than in the two day event alone. It is envisaged that this project will greatly increase participation in mobility projects amongst VETPRO staff, trainees in initial vocational training and people in the labour market, particularly through SME

Projektinformationen

involvement, across the region, both in terms of residents of the region undertaking mobility across Europe and in terms of welcoming Leonardo participants from other EU countries to the region.

Beschreibung: In January 2008 the European Union granted North Devon College funding from the Lifelong Learning Programme 2007-2013 to carry out a unique research project that is aimed at increasing the amount of European Union Leonardo da Vinci funding coming into the region with the primary objective of increasing the number of people participating in a Leonardo da Vinci project. Leonardo da Vinci funds mobility projects where participants visit a range of European countries and undertake a work placement and benefit from different cultural and practical experiences.

The WIDER Project (Widening in Dissemination and Exploitation of Results), is the only project of its kind being undertaken in the EU and celebrates over 10 years of North Devon College activity utilising European funding, particularly within the scope of the Leonardo da Vinci programme (and its predecessors), which promotes the mobility of students and staff across Europe, focussing on vocational education and training. The programme provides opportunities for vocational trainees and trainers to gain work experience, exchange best practice and observe different ways of delivering training across the European Union. During the past 10 years, small groups of vocational trainees have taken enormous benefit from the opportunity to gain work experience in other EU countries such as Sweden, Hungary, France, Spain and Germany, with North Devon College staff, who have worked with those involved, witnessing the immensely positive immediate impact EU mobility has had on individuals in terms of raised aspirations, and skills, knowledge and experience gained. North Devon College is the main provider of training and education for those over 16 years in North Devon and Torridge and also delivers significant volumes of training in other areas of Devon, Cornwall and Somerset. These are rural counties within the South West of England covering a wide geographic area, with many isolated communities. The rural isolation of the region fosters a parochial view of life and work, with large sections of the community unaware of, and not aspiring to work within other areas of the European Union. This parochial isolation also fosters a low skilled, low wage economy, where the high cost of living compared to low levels of income creates relative poverty and disadvantage. Increasing the potential for a higher skilled, higher waged workforce is one way of combating this disadvantage and isolation in the South West of England. Making vocational training more attractive and more effective through EU mobility will assist in achieving a higher skilled workforce and will ensure participants are much better equipped to compete in the EU Labour Market. The key focus of the WIDER project has been to undertake research to assess the longer term benefits of participation on these projects.
