

Go&Learn initiative

WEBSITE DEVELOPMENT GUIDELINES

G&L European Network Management Body

The Go&Learn initiative is a multilateral network supported by the EU LLP funds. It is aimed to organize and manage an international catalogue of study visits to be carried out inside companies all around Europe. The visits have training and guidance aims and should be considered as Training Units that can be proposed to a vast range of users: students of vocational and secondary school, university, employed and unemployed people, teachers and trainers. The hosting companies are strongly committed in training and in knowledge propagation, allowing the visiting groups to learn directly from the source of knowledge, experience and innovation, which is the company itself. Detailed and updated information about the network members, the activities and services available are available in the official website of the project: www.goandlearn.eu and in the national websites of the project partners.

1 Introduction

This document describes the content and features of the Go&Learn official website of the transnational seminars circuits and discovery visits tours maintained by the ENMG and constantly updated by the LNMGs.

The website is also the place where all the websites referring to the local catalogues managed by the various LNMBs converge. Links to all the local websites will be present in it, thus helping the dissemination and promo not only of the transnational circuits but also of the local visits and seminars.

Approved by the ENMG, this document is the reference for the web developers. The graphics, colours and logos should be aligned with the specification of the Image Manual.

1.1 Recommendations about interface characteristics

The interface should be as simple as possible, with clear distinction between the sections available for customers of the G&L services (schools, universities, training providers, individuals) and those pages of use of the G&L network members (i.e. the LNMBs and the ENMG). In general terms, the first should allow consultation of catalogues and calendars, request for information and support, enrollment to the training activities, latter should allow partners to constantly update the content of catalogues and networks partner's sheets.

The main catalogue is the international circuits catalogue, but the platform is suitable to host the publishing of the other catalogues autonomously managed by each LNMB at cross-border or local level. The enrollment page will be developed in reference only to the international circuits, not the cross-border or local ones since those will be managed directly by the LNMBs.
