

Evaluation of working package No. 2

Transfer and Customization of Innovate Structures – part 2

The first survey for WP 2 was conducted during online from 10th to 19th May online. The project partners had to fill out the online questionnaire and had the opportunity to give an explanation (attached to this report). The questions are based on the planned activities and the objectives of each working package.

The following review is the result of this survey.

1. The evaluation

The partners assess the achievement of the objectives of the working package 1 on a scale between 1 and 10 with 7.9 to 8.9 points. This result has a wider range than the first survey but better in average. This is from the perspective of the evaluator a good result. Comparing with the first survey the partners give some more comments:

The difficulties in defining the objectives and the methods at the beginning seem to be overcome. One partner commented that “any analysis of SOLTEC was purely for comparison I understood” but on the other hand a good basis for the development and transfer into new working fields. Also the ratings show that there is no real unhappiness. The partners state that “the research helped to understand and to get to know the relevant information needed for the development of the (new) qualification” and “to get relevant information in order to build the European Biomass Qualification”. The partners say that the reports about their existing national certificates related to biomass installers are (nearly) complete and that the needs’ analysis report of their country (related to biomass installers) has been totally finished.

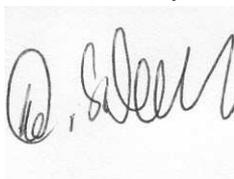

Thus, the targets have been achieved almost entirely. The partner’s satisfaction is to a very high level.

Evaluation of working package No. 2

Transfer and Customization of Innovate Structures – part 2

2. Recommendations

It can be assumed on the basis of this survey that all objectives have been almost reached. The coordinators should emphasize that this result is also adequately described in the report.

Addendum – data basis

Zeitstempel	1a. The analysis of the SOLTEC tools have been done in every country with effectiveness and completeness	1b. Additional remarks - if necessary to understand your assessment	2a. The results of the SOLTEC tools presented in national workshops (innovative structures and methods of the SOLTEC project) are a good basis to develop the needs analysis in the biomass sector in your country (point 2/1 in WP 2 of project application)	2b. Additional comments, to understand better your assessment	3a. The desk research about existing certificates with relevance for installation, service and maintenance competences for biomass projects (point 2/2 in WP 2 of project application) are a good basis for the development of an European Biomass Technician Qualification	3b. Additional comments, to understand better your assessment	4a. The reports of your existing national certificates related to biomass installers are complete	4b. What is missing and what has to be done for the next time?	5a. The needs' analysis report of your of your country (related to biomass installers) has been finished	5b. What is missing and what has to be done for the next time?
